Permit for Facility #: A2066

I. STANDARD CONDITIONS

A. Administrative Requirements

The permit holder shall comply with all applicable requirements in the following regulations:

BAAQMD Regulation 1 - General Provisions and Definitions

(as amended by the District Board on 5/4/11);

SIP Regulation 1 - General Provisions and Definitions

(as approved by EPA through 6/28/99);

BAAQMD Regulation 2, Rule 1 - Permits, General Requirements

(as amended by the District Board on 12/6/17);

SIP Regulation 2, Rule 1 - Permits, General Requirements

(as approved by EPA through 8/1/16);

BAAQMD Regulation 2, Rule 2 - Permits, New Source Review

(as amended by the District Board on 12/6/17);

SIP Regulation 2, Rule 2 - Permits, New Source Review and Prevention of Significant Deterioration

(as approved by EPA through 8/1/16);

BAAQMD Regulation 2, Rule 4 - Permits, Emissions Banking

(as amended by the District Board on 12/6/17);

SIP Regulation 2, Rule 4 - Permits, Emissions Banking

(as approved by EPA through 12/4/17);

BAAQMD Regulation 2, Rule 5 – Permits, New Source Review of Toxic Air Contaminants

(as amended by the District Board on 12/7/16);

BAAQMD Regulation 2, Rule 6 - Permits, Major Facility Review

(as amended by the District Board on 12/6/17) and

SIP Regulation 2, Rule 6 – Permits, Major Facility Review

(as approved by EPA through 6/23/95)

B. Conditions to Implement Regulation 2, Rule 6, Major Facility Review

3

1. This Major Facility Review Permit was issued on December 16, 2019 and expires on December 15, 2024. The permit holder shall submit a complete application for renewal of this Major Facility Review Permit no later than June 15, 2024 and no earlier than December 15, 2023. **If a complete application for renewal has not been submitted in accordance with this deadline, the facility may not operate after December 15, 2024.** If the permit renewal has not been issued by December 15, 2024, but a complete application for renewal has been submitted in accordance with the above deadlines, the existing permit will continue in force until the district takes final action on the renewal application. (Regulation 2-6-307, 404.2, 407 & 409.6; MOP Volume II, Part 3, §4.2)

- 2. The permit holder shall comply with all conditions of this permit. The permit consists of this document and all appendices. Any non-compliance with the terms and conditions of this permit will constitute a violation of the law and will be grounds for enforcement action; permit termination, revocation and re-issuance, or modification; or denial of a permit renewal application. (Regulation 2-6-307; MOP Volume II, Part 3, §4.11)
- 3. In the event any enforcement action is brought as a result of a violation of any term or condition of this permit, the fact that it would have been necessary for the permittee to halt or reduce the permitted activity in order to maintain compliance with such term or condition shall not be a defense to such enforcement action. (MOP Volume II, Part 3, §4.11)
- 4. This permit may be modified, revoked, reopened and reissued, or terminated for cause. (Regulation 2-6-307, 409.8, 415; MOP Volume II, Part 3, §4.11)
- 5. The filing of a request by the facility for a permit modification, revocation and reissuance, or termination, or the filing of a notification of planned changes or anticipated non-compliance does not stay the applicability of any permit condition. (Regulation 2-6-409.7; MOP Volume II, Part 3, §4.11)
- 6. This permit does not convey any property rights of any sort, or any exclusive privilege. (Regulation 2-6-409.7; MOP Volume II, Part 3, §4.11)
- 7. The permit holder shall supply within 30 days any information that the District requests in writing to determine whether cause exists for modifying, revoking and reissuing, or terminating the permit or to determine compliance with the permit. (Regulation 1-441, Regulation 2-6-409.4 & 501; MOP Volume II, Part 3, §4.11)
- 8. Any records required to be maintained pursuant to this permit that the permittee considers to contain proprietary or trade secret information shall be prominently designated as such. Copies of any such proprietary or trade secret information which are provided to the District shall be maintained by the District in a locked confidential file, provided, however, that requests from the public for the review of any such information shall be handled in accordance with the District's procedures set forth in Section 11 of the District's Administrative Code. (Regulation 2-6-419; MOP Volume II, Part 3, §4.11)
- 9. Proprietary or trade secret information provided to EPA will be subject to the requirements of 40 CFR Part 2, Subpart B Public Information, Confidentiality of Business Information. (40 CFR Part 2)

- 10. The emissions inventory submitted with the application for this Major Facility Review Permit is an estimate of actual emissions or the potential to emit for the time period stated and is included only as one means of determining applicable requirements for emission sources. It does not establish, or constitute a basis for establishing, any new emission limitations. (MOP Volume II, Part 3, §4.11)
- 11. The responsible official shall certify all documents submitted by the facility pursuant to the major facility review permit. The certification shall state that based on information and belief formed after reasonable inquiry, the statements and information in the document are true, accurate, and complete. The certifications shall be signed by a responsible official for the facility. (Regulation 2-6-409.20, MOP Volume II, Part 3, §4.11)
- 12. The permit holder is responsible for compliance, and certification of compliance, with all conditions of the permit, regardless of whether it acts through employees, agents, contractors, or subcontractors. (Regulation 2-6-307)

C. Requirement to Pay Fees

The permit holder shall pay annual fees in accordance with District Regulation 3, including Schedule P. (Regulation 2-6-402 & 409.13, Regulation 3; MOP Volume II, Part 3, §4.12)

D. Inspection and Entry

Access to Facility: The permit holder shall provide reasonable access to the facility and equipment that is subject to this permit to the APCO and/or to his or her designee. (Regulation 1-440, Regulation 2-6-409.3; MOP Volume II, Part 3, §4.14)

E. Records

- 1. The permit holder must provide any information, records, and reports requested or specified by the APCO. (Regulation 1-441, Regulation 2-6-409.4)
- 2. Notwithstanding the specific wording in any requirement, all records for federally enforceable requirements shall be maintained for at least five years from the date of creation of the record. (Regulation 2-6-501; MOP Volume II, Part 3, §4.7)

F. Monitoring Reports

Reports of all required monitoring must be submitted to the District at least once every six months, except where an applicable requirement specifies more frequent reporting. Reports shall be for the following periods: June 1st through November 30th and

5

December 1st through May 31st, and are due on the last day of the month after the end of the reporting period. All instances of non-compliance shall be clearly identified in these reports. The reports shall be certified by the responsible official as true, accurate, and complete. In addition, all instances of non-compliance with the permit shall be reported in writing to the District's Compliance and Enforcement Division within 10 calendar days of the discovery of the incident. Within 30 calendar days of the discovery of any incident of non-compliance, the facility shall submit a written report including the probable cause of non-compliance and any corrective or preventative actions. The reports shall be sent by e-mail to compliance@baaqmd.gov or by postal mail to the following address:

Director of Compliance and Enforcement Bay Area Air Quality Management District 375 Beale Street, Suite 600 San Francisco, CA 94105 Attn: Title V Reports

(Regulation 2-6-502; MOP Volume II, Part 3, §4.7)

G. Compliance Certification

Compliance certifications shall be submitted annually by the responsible official of this facility to the Bay Area Air Quality Management District and to the Environmental Protection Agency. The certification period will be December 1st through November 30th. The certification shall be submitted by December 31st of each year. The certification must list each applicable requirement, the compliance status, whether compliance was continuous or intermittent, the method used to determine compliance, and any other specific information required by the permit. The certification should be directed to the District's Compliance and Enforcement Division at the address above, and a copy of the certification shall be sent by e-mail to r9.aeo@epa.gov or postal mail to the Environmental Protection Agency at the following address:

Director Enforcement Division, TRI & Air Section (ENF-2-1) USEPA Region 9 75 Hawthorne Street San Francisco, California 94105

(MOP Volume II, Part 3, §4.5 and 4.15)

H. Emergency Provisions

- 1. The permit holder may seek relief from enforcement action in the event of a breakdown, as defined by Regulation 1-208 of the District's Rules and Regulations, by following the procedures contained in Regulations 1-431 and 1-432. The District will thereafter determine whether breakdown relief will be granted in accordance with Regulation 1-433. (MOP Volume II, Part 3, §4.8)
- 2. The permit holder may seek relief from enforcement action for a violation of any of the terms and conditions of this permit by applying to the District's Hearing Board for a variance pursuant to Health and Safety Code Section 42350. The Hearing Board will determine after notice and hearing whether variance relief should be granted in accordance with the procedures and standards set forth in Health and Safety Code Section 42350 et seq. (MOP Volume II, Part 3, §4.8)
- 3. The granting by the District of breakdown relief or the issuance by the Hearing Board of a variance will not provide relief from federal enforcement. (MOP Volume II, Part 3, §4.8)

I. Severability

In the event that any provision of this permit is invalidated by a court or tribunal of competent jurisdiction, or by the Administrator of the EPA, all remaining portions of the permit shall remain in full force and effect. (Regulation 2-6-409.5; MOP Volume II, Part 3, §4.10)

J. Miscellaneous Conditions

1. The maximum capacity for each source as shown in Table II-A is the maximum allowable capacity. Exceedance of the maximum allowable capacity for any source is a violation of Regulation 2, Rule 1, Section 301. (Regulation 2-1-301)

7

II. EQUIPMENT

A. Permitted Source List

Each of the following sources has been issued a permit to operate pursuant to the requirements of BAAQMD Regulation 2, Permits. The capacities in this table are the maximum allowable capacities for each source, pursuant to Standard Condition I.J and Regulation 2-1-301.

Table II – A
Permitted Sources

S-#	Description	Make or Type	Model	Capacity
S-2	Altamont Landfill -	Types of waste		Maximum Waste Acceptance
	Waste Decomposition	accepted include:		Rate = 11,150 tons/day
	Process	municipal, commercial,		Maximum Design Capacity
		industrial, construction,		$= 124.4 E6 yd^3$
		and designated/special		Maximum Cumulative Amount of
		wastes (industrial and		compostable Materials
		sewage sludge and		= 51.02 E6 tons,
		contaminated soils)		with incremental increases as
				allowed by Condition # 19235,
				Part 17
	Landfill Gas Collection	active		111 vertical wells
	System			2 horizontal collector
				1 leachate collection riser
				with well and collector counts
				updated as allowed by Condition
				# 19235, Part 1b
S-6	Gas Turbine,	Solar Centaur	T-4500	3330 kW,
	fired on landfill gas			57.4 E6 BTU/hour

II. Equipment

C. Significant Source List

Each of the following sources is exempt from BAAQMD permit requirements but is included in this major facility review permit, because the source was determined to be a significant source as defined in BAAQMD Regulation 2-6-239. The capacities in this table are the maximum allowable capacities for each source, pursuant to Standard Condition I.J.

Table II – C Significant Sources

	Grinding Operation	Model 1300		BAAQMD permitting
				requirements per
				Regulation 2-1-105

12

II. Equipment

D. Exempt Equipment List

Each of the following devices is exempt from major facility review permitting pursuant to the requirements of BAAQMD Regulation 2, Rule 6: Permits, Major Facility Review. The applicable exemption for each device is identified in the table below. Registered portable engines and non-road engines are exempt from BAAQMD Regulation 2, Rule 6 pursuant to BAAQMD Regulation 2-6-113 and 2-6-114, respectively, even though these engines may be required to have a BAAQMD permit to operate pursuant to BAAQMD Regulation 2, Rule 1, Permit, General Requirements.

Table II – D Exempt Equipment

S-#	Description	Type or	Capacity	Comments
		Make and Model		
S-31	PERP Diesel Engine for	MY 2000,	860 bhp,	Exempt per 2-6-114
	Green Waste Grinder	Caterpillar,	1649 in ³ displacement,	
		Model 3412E	44.8 gallons/hr diesel oil,	
			6.14E6 BTU/hour	
S-221	Portable CNG-Fired	Model Year 2012,	145 bhp,	Exempt per 2-6-114
	Engine for Tipper # 83;	Caterpillar G3306	638 in ³ displacement,	
	abated by A-221 CleanAir		1.08 MM BTU/hour of	
	Assure TWC Catalytic		CNG	
	Controls for NOx, CO, and			
	HC			
S-224	Portable Diesel Engine for	Model Year 2015	124 bhp	Exempt per 2-6-114
	Tipper #71	Caterpillar C4.4	268 in ³ displacement	
			6.49 gallons/hour diesel	
			oil	
			0.89 MM BTU/hour	
S-225	Portable Diesel Engine for	Model Year 2015	124 bhp	Exempt per 2-6-114
	Tipper #93	Caterpillar C4.4	268.5 in ³ displacement	
			6.49 gallons/hour diesel	
			oil	
			0.89 MM BTU/hour	
S-228	Portable Diesel Engine for	Model Year 2017	124 bhp	Exempt per 2-6-114
	Tipper #70	Caterpillar C4.4	268.5 in ³ displacement	
			6.49 gallons/hour diesel	
			oil	
			0.89 MM BTU/hour	

III. GENERALLY APPLICABLE REQUIREMENTS

The permit holder shall comply with all applicable requirements, including those specified in the BAAQMD and SIP rules and regulations and other federal requirements cited below. These requirements apply in a general manner to the facility and/or to sources exempt from the requirement to obtain a District Permit to Operate. The District has determined that these requirements will not be violated under normal, routine operations, and that no additional periodic monitoring or reporting to demonstrate compliance is warranted. In cases where a requirement, in addition to being generally applicable, is also specifically applicable to one or more sources, the requirement and the source are also included in Section IV, Source-Specific Applicable Requirements, of this permit. This section also contains provisions that may apply to temporary sources.

The dates in parentheses in the Title column identify the versions of the regulations being cited and are, as applicable:

- 1. BAAQMD regulation(s): The date(s) of adoption or most recent amendment of the regulation by the District Board of Directors
- 2. Any federal requirement, including a version of a District regulation that has been approved into the SIP: The most recent date of EPA approval of any portion of the rule, encompassing all actions on the rule through that date

The full language of the SIP requirements are posted on the EPA Region 9 website. The address is:

https://www.epa.gov/sips-ca/epa-approved-bay-area-air-district-regulations-california-sip NOTE:

There are differences between the current BAAQMD rules and the versions of the rules in the SIP. All sources must comply with <u>both</u> versions of a rule until US EPA has reviewed and approved the District's revision of the regulation.

IV. SOURCE-SPECIFIC APPLICABLE REQUIREMENTS

The permit holder shall comply with all applicable requirements, including those specified in the BAAQMD and SIP rules and regulations and other federal requirements cited below. The requirements cited in the following tables apply in a specific manner to the indicated source(s).

The dates in parentheses in the Title column identify the versions of the regulations being cited and are, as applicable:

- 1. BAAQMD regulation(s): The date(s) of adoption or most recent amendment of the regulation by the District Board of Directors
- 2. Any federal requirement, including a version of a District regulation that has been approved into the SIP: The most recent date of EPA approval of any portion of the rule, encompassing all actions on the rule through that date

The full text of each permit condition cited is included in Section VI, Permit Conditions, of this permit. The full language of the SIP requirements are posted on the EPA Region 9 website. The address is:

https://www.epa.gov/sips-ca/epa-approved-bay-area-air-district-regulations-california-sip

All other text may be found in the regulations themselves.

Table IV – A

Source-Specific Applicable Requirements
S-2 ALTAMONT LANDFILL -WASTE DECOMPOSITION PROCESS,
EQUIPPED WITH LANDFILL GAS COLLECTION SYSTEM AND ABATED BY
A-15 LANDFILL GAS FLARE AND A-16 LANDFILL GAS FLARE;
S-43 ALTAMONT LANDFILL - WASTE AND COVER MATERIAL DUMPING; AND
S-44 ALTAMONT LANDFILL - EXCAVATING, BULLDOZING, AND COMPACTING
ACTIVITIES

		Federally	Future

60.752(b)	Requirements for MSW Landfills with Design Capacity equal to or greater than 2.5 million Mg and 2.5 million m³ (Large Designated Facilities)	Y	
60.752(b)(2)	Comply with all requirements in sections (b)(2)(i through iv)	Y	
60.752 (b)(2)(i)	Submit a Collection and Control System Design Plan	Y	
60.752 (b)(2)(i)(A)	The collection and control system in the Design Plan shall comply with 60.752(b)(2)(ii)	Y	
60.752 (b)(2)(i)(B)	Design Plan shall include all proposed alternatives to 60.753 through 60.758	Y	
60.752 (b)(2)(i)(C)	Design Plan shall conform to 60.759 (active collection system) or demonstrate sufficiency of proposed alternatives	Y	
60.752 (b)(2)(ii)	Install a collection and control system	Y	
60.752 (b)(2)(iii)	Route collected gases to a control system.	Y	
60.752 (b)(2)(iii)(B)	Reduce NMOC emissions by 98% by weight or reduce NMOC outlet concentration to less than 20 ppmv as hexane at 3% O ₂ , dry basis, as demonstrated by initial performance test within 180 days of start-up. (applies to flares)	Y	
60.752 (b)(2)(iv)	Operate in accordance with 60.753, 60.755, and 60.756	Y	
60.752(c)	Title V Operating Permit Requirements	Y	

IV. Source-Specific Applicable Requirements

Table IV - A

Source-Specific Applicable Requirements S-2 Altamont Landfill -Waste Decomposition Process, Equipped with Landfill Gas Collection System and Abated by A-15 Landfill Gas Flare and A-16 Landfill Gas Flare; S-43 Altamont Landfill - Waste and Cover Material Dumping; and S-44 Altamont Landfill - Excavating, Bulldozing, and Compacting Activities

Applicable Requirement	Regulation Title or Description of Requirement	Federally Enforceable (Y/N)	Future Effective Date
60.752(c)(1)	Subject date is June 10, 1996 for Landfills new or modified between	Y	
	May 30, 1991 and March 12, 1996		
60.753	Operational Standards for Collection and Control Systems	Y	
60.753(a)	Operate a Collection System in each area or cell in which:	Y	
60.753(a)(1)	Active Cell – solid waste in place for 5 years or more	Y	
60.753(a)(2)	Closed/Final Grade – solid waste in place for 2 years or more	Y	
60.753(b)	Operate each wellhead under negative pressure unless:	Y	
60.753(b)(1)	Fire or increased well temperature or to prevent fire	Y	
60.753(b)(2)	Use of geomembrane or synthetic cover (subject to alternative pressure limits)	Y	
60.753(b)(3)	Decommissioned well after approval received for shut-down	Y	
60.753(c)	Operate each wellhead at $<$ 55 °C, and either $<$ 20% N_2 or $<$ than 5% O_2	Y	
	(or other approved alternative levels)		
60.753(c)(1)	N ₂ determined by Method 3C	Y	
60.753(c)(2)	O ₂ determined by 3A and as described in (2)(i-v)	Y	
60.753(d)	Surface Leak Limit is less than 500 ppm methane above background at landfill surface. This section also describes some surface monitoring procedures.	Y	
60.753(e)	Vent all collected gases to a control system complying with 60.752(b)(2)(iii). If collection or control system inoperable, shut down gas mover and close all vents within 1 hour	Y	
60.753(f)	Operate the control system at all times when collected gas is routed to the control system	Y	
60.753(g)	If monitoring demonstrates that 60.753(b), (c), or (d) are not being met, corrective action must be taken	Y	
60.754	Test Methods and Procedures	Y	
60.754(c)	For PSD, NMOC emissions shall be calculated using AP-42	Y	
60.754(d)	Test Methods for Performance Test (Method 18 or 25C)	Y	
60.755	Compliance Provisions	Y	
60.755(a)	For Gas Collection Systems	Y	

IV. Source-Specific Applicable Requirements

Table IV - A

Source-Specific Applicable Requirements S-2 Altamont Landfill -Waste Decomposition Process, Equipped with Landfill Gas Collection System and Abated by A-15 Landfill Gas Flare and A-16 Landfill Gas Flare; S-43 Altamont Landfill - Waste and Cover Material Dumping; and S-44 Altamont Landfill - Excavating, Bulldozing, and Compacting Activities

Applicable Requirement	Regulation Title or Description of Requirement	Federally Enforceable (Y/N)	Future Effective Date
60.755(a)(1)	Calculation procedures for maximum expected gas generation flow rate	Y	
60.755	Equation for unknown year-to-year waste acceptance rate	Y	
(a)(1)(i)			
60.755	Equation for known year-to-year waste acceptance rate	Y	
(a)(1)(ii)			
60.755(a)(2)	Vertical wells and horizontal collectors shall be of sufficient density to meet all performance specifications	Y	
60.755(a)(3)	Measure wellhead pressure monthly. If pressure is positive, take corrective action (final corrective action = expand system within 120 days of initial positive pressure reading)	Y	
60.755(a)(4)	Expansion not required during first 180 days after startup.	Y	
60.755(a)(5)	Monitor wellheads monthly for temperature and either nitrogen or oxygen. If readings exceed limits, take corrective action up to expanding system within 120 days of first excess.	Y	
60.755(b)	Wells shall be placed in cells as described in Design Plan and no later than 60 days after:	Y	
60.755(b)(1)	Five years after initial waste placement in cell, for active cells	Y	
60.755(b)(2)	Two years after initial waste placement in cell, for closed/final grade cells.	Y	
60.755(c)	Procedures for complying with surface methane standard	Y	
60.755(c)(1)	Quarterly monitoring of surface and perimeter	Y	
60.755(c)(2)	Procedure for determining background concentration	Y	
60.755(c)(3)	Method 21 except probe inlet placed 5-10 cm above ground	Y	
60.755(c)(4)	Excess is any reading of 500 ppmv or more. Take corrective action indicated below (i-v).	Y	
60.755 (c)(4)(i)	Mark and record location of excess	Y	
60.755 (c)(4)(ii)	Repair cover or adjust vacuum. Re-monitor within 10 calendar days.	Y	

IV. Source-Specific Applicable Requirements

Table IV – A

Source-Specific Applicable Requirements S-2 Altamont Landfill -Waste Decomposition Process, Equipped with Landfill Gas Collection System and Abated by A-15 Landfill Gas Flare and A-16 Landfill Gas Flare; S-43 Altamont Landfill - Waste and Cover Material Dumping; and S-44 Altamont Landfill - Excavating, Bulldozing, and Compacting Activities

Applicable Requirement	Regulation Title or Description of Requirement	Federally Enforceable (Y/N)	Future Effective Date
60.755	If still exceeding 500 ppmv, take additional corrective action. Re-	Y	
(c)(4)(iii)	monitor within 10 calendar days of 2 nd excess.		
60.755	Re-monitor within 1 month of initial excess.	Y	
(c)(4)(iv)			
60.755	For any location with 3 monitored excesses in a quarter, additional	Y	
(c)(4)(v)	collectors (or other approved collection system repairs) shall be		
	operational within 120 days of 1st excess.		
60.755(c)(5)	Monitor cover integrity monthly and repair as needed.	Y	
60.755(d)	Instrumentation and procedures for complying with 60.755(c).	Y	
60.755(d)(1)	Portable analyzer meeting Method 21	Y	
60.755(d)(2)	Calibrated with methane diluted to 500 ppmv in air	Y	
60.755(d)(3)	Use Method 21, Section 4.4 instrument evaluation procedures	Y	
60.755(d)(4)	Calibrate per Method 21, Section 4.2 immediately before monitoring.	Y	
60.755(e)	Provisions apply at all times except during startup, shutdown, or	Y	
	malfunction, provided the duration of these shall not exceed 5 days for		
	collection systems or 1 hour for control systems.		
60.756	Monitoring of Operations	Y	
60.756(a)	For active collection systems, install wellhead sampling port	Y	
60.756(a)(1)	Measure gauge pressure in wellhead on a monthly basis	Y	
60.756(a)(2)	Measure nitrogen or oxygen concentration in wellhead gas on a monthly	Y	
	basis.		
60.756(a)(3)	Measure temperature of wellhead gas on a monthly basis.	Y	
60.756(b)	Enclosed combustors shall comply with (b)(1) and (b)(2)	Y	
60.756(b)(1)	Temperature monitor and continuous recorder (not required for boilers	Y	
	and process heaters with capacity > 44 MW)		
60.756(b)(2)	Device that records flow to or bypass of the control device (i or ii	Y	
	below)		
60.756	Install, calibrate, and maintain a device that records flow to the control	Y	
(b)(2)(i)	device at least every 15 minutes.		
60.756(e)	Procedures for requesting alternative monitoring parameters	Y	

IV. Source-Specific Applicable Requirements

Table IV - A

Source-Specific Applicable Requirements S-2 Altamont Landfill -Waste Decomposition Process, Equipped with Landfill Gas Collection System and Abated by A-15 Landfill Gas Flare and A-16 Landfill Gas Flare; S-43 Altamont Landfill - Waste and Cover Material Dumping; and S-44 Altamont Landfill - Excavating, Bulldozing, and Compacting Activities

Applicable Requirement	Regulation Title or Description of Requirement	Federally Enforceable (Y/N)	Future Effective Date
60.756(f)	Monitor surface on a quarterly basis.	Y	
60.757	Reporting Requirements	Y	
60.757(a)(3)	Amended Design Capacity Report required within 90 days of receiving a permitted increase in design capacity or within 90 days of an annual density calculation that results in a design capacity over the thresholds.	Y	
60.757(b)(3)	Sites with collection and control systems operating in compliance with this subpart are exempt from (b)(1) and (b)(2) above.	Y	
60.757(c)	Submit a Collection and Control System Design Plan within 1 year of first NMOC emission rate report showing NMOC > 50 MG/year, except as follows	Y	
60.757(f)	Submit Annual Reports containing information required by (f)(1) through (f)(6)	Y	
60.757(f)(1)	Value and length of time for exceedance of parameters monitored per 60.756(a), (b) or (d)	Y	
60.757(f)(2)	Description and duration of all periods when gas is diverted from the control device by a by-pass line	Y	
60.757(f)(3)	Description and duration of all periods when control device was not operating for more than 1 hour	Y	
60.757(f)(4)	All periods when collection system was not operating for more than 5 days.	Y	
60.757(f)(5)	Location of each surface emission excess and all re-monitoring dates and concentrations.	Y	
60.757(f)(6)	Location and installation dates for any wells or collectors added as a result of corrective action for a monitored excess.	Y	
60.757(g)	Initial Performance Test Report Requirements (g)(1-6)	Y	
60.757(g)(1)	Diagram of collection system showing positions of all existing collectors, proposed positions for future collectors, and areas to be excluded from control.	Y	
60.757(g)(2)	Basis for collector positioning to meet sufficient density req.	Y	

IV. Source-Specific Applicable Requirements

Table IV - A

Source-Specific Applicable Requirements S-2 Altamont Landfill -Waste Decomposition Process, Equipped with Landfill Gas Collection System and Abated by A-15 Landfill Gas Flare and A-16 Landfill Gas Flare; S-43 Altamont Landfill - Waste and Cover Material Dumping; and S-44 Altamont Landfill - Excavating, Bulldozing, and Compacting Activities

Applicable	Regulation Title or	Federally Enforceable	Future Effective
Requirement	Description of Requirement	(Y/N)	Date
60.757(g)(3)	Documentation supporting percentage of asbestos or non-degradable	Y	
	material claims for areas without a collection system.		
60.757(g)(4)	For areas excluded from collection due to non-productivity, calculations	Y	
	and gas generation rates for each non-productive area and the sum for all		
	nonproductive areas.		
60.757(g)(5)	Provisions for increasing gas mover equipment if current system is	Y	
	inadequate to handle maximum projected gas flow rate.		
60.757(g)(6)	Provisions for control of off-site migration	Y	
60.758	Recordkeeping Requirements	Y	
60.758(a)	Design Capacity and Waste Acceptance Records (retain 5 years)	Y	
60.758(b)	Collection and Control Equipment Records (retain for life of control	Y	
	equipment except 5 years for monitoring data)		
60.758(b)(1)	Collection System Records	Y	
60.758	Maximum expected gas generation flow rate.	Y	
(b)(1)(i)			
60.758	Density of wells and collectors	Y	
(b)(1)(ii)			
60.758(b)(2)	Control System Records - enclosed combustors other than boilers or	Y	
	process heaters with heat input > 44 MW		
60.758	Combustion temperature measured every 15 minutes and averaged over	Y	
(b)(2)(i)	the same time period as the performance test		
60.758	Percent NMOC reduction achieved by the control device	Y	
(b)(2)(ii)			
60.758(c)	Records of parameters monitored pursuant to 60.756 and periods of	Y	
	operation when boundaries are exceeded (retain for 5 years).		
60.758(c)(1)	Exceedances subject to record keeping are	Y	
60.758	All 3-hour periods when average combustion temperature was more than	Y	
(c)(1)(i)	28 C below the average combustion temperature during the most recent		
	complying performance test		

IV. Source-Specific Applicable Requirements

Table IV - A

Source-Specific Applicable Requirements S-2 Altamont Landfill -Waste Decomposition Process, Equipped with Landfill Gas Collection System and Abated by A-15 Landfill Gas Flare and A-16 Landfill Gas Flare; S-43 Altamont Landfill - Waste and Cover Material Dumping; and S-44 Altamont Landfill - Excavating, Bulldozing, and Compacting Activities

Applicable Requirement	Regulation Title or Description of Requirement	Federally Enforceable (Y/N)	Future Effective Date
60.758(c)(2)	Records of continuous flow to control device or monthly inspection records if seal and lock for bypass valves	Y	
60.758(d)	Plot map showing location of all existing and planned collectors with a unique label for each collector (retain for life of collection system)	Y	
60.758(d)(1)	Installation date and location of all newly installed collectors	Y	
60.758(d)(2)	Records of nature, deposition date, amount, and location of asbestos or non-degradable waste excluded from control	Y	
60.758(e)	Records of any exceedance of 60.753, location of exceedance and remonitoring dates and data (for wellheads and surface). Retain for 5 years.	Y	
60.759	Specifications for Active Collection Systems	Y	
60.759(a)	Active wells and collectors shall be at sufficient density	Y	
60.759(a)(1)	Collection System in refuse shall be certified by PE to achieve comprehensive control of surface gas emissions	Y	
60.759(a)(2)	Collection Systems (active or passive) outside of refuse shall address migration control	Y	
60.759(a)(3)	All gas producing areas shall be controlled except as described below (i-iii).	Y	
60.759(b)	Gas Collection System Components	Y	
60.759(b)(1)	Must be constructed of PVC, HDPE, fiberglass, stainless steel, or other approved material and of suitable dimensions to convey projected gas amounts and withstand settling, traffic, etc.	Y	
60.759(b)(2)	Collectors shall not endanger liner, shall manage condensate and leachate, and shall prevent air intrusion and surface leaks.	Y	
60.759(b)(3)	Header connection assemblies shall include positive closing throttle valve, seals and couplings to prevent leaks, at least one sampling port, and shall be constructed of PVC, HDPE, fiberglass, stainless steel, or other approved materials.	Y	
60.759(c)	Gas Mover Equipment shall be sized to handle maximum expected gas generation rate over the intended period of use.	Y

V. SCHEDULE OF COMPLIANCE

The permit holder shall comply with all applicable requirements cited in this permit. The permit holder shall also comply with applicable requirements that become effective during the term of this permit on a timely basis.

VI. PERMIT CONDITIONS

Any condition that is preceded by an asterisk is not federally enforceable.

Condition # 18773

FOR: S-6 GAS TURBINE WITH A-6 FOGGING SYSTEM AND FOR: S-7 GAS TURBINE WITH A-7 FOGGING SYSTEM

- Nitrogen oxide (NO_x) emissions from each Gas Turbine (S-6 and S-7) shall not exceed 0.1567 pounds of NO_x (calculated as NO₂) per MM BTU.
 (Basis: Cumulative Increase and Regulation 2-1-301)
- Carbon monoxide (CO) emissions from each Gas Turbine (S-6 and S-7) shall not exceed 0.2229 pounds of CO per MM BTU.
 (Basis: Cumulative Increase and Regulation 2-1-301)
- 3. Deleted
- 4. Each Gas Turbine is equipped with a Fogging System (A-6 or A-7). The A-6 and A-7 Fogging Systems are not required for compliance and may be operated or not operated at the discretion of the Permit Holder. (Basis: Regulation 2-1-301)
- 5. A District-approved logbook shall be maintained on the number of days each Gas Turbine is operated and the days when each Fogging System is operated. (Basis: Regulation 2-1-301, 8-34-113, 8-34-301.1, and 8-34-501.2)
- 6. In the event of a Gas Turbine shutdown, all landfill gas normally fired by the non-operating Gas Turbine(s) shall be diverted to one or more of the other approved landfill gas control devices for this facility unless the requirements of Regulation 8-34-113 are being followed. Raw landfill gas shall not be vented to the atmosphere, except for unavoidable landfill gas emissions that occur during control system installation, maintenance, or repair that is performed in compliance with Regulation 8, Rule 34, Sections 113, 116, 117, or 118 and for inadvertent component leaks that do not exceed the limits specified in 8-34-301.2. (Basis: Regulations 8-34-113, 8-34-301 and 8-34-301.1)
- 7. The time between the Gas Turbine shut-down and the start-up of the alternative control device(s) shall be included in calculating the shutdown exemption under Regulation 8-34-113. (Basis: Regulations 8-34-113 and 8-34-501.2)
- 8. The heat input to each Gas Turbine (S-6 and S-7) shall not exceed 1378 MM BTU during any day. The combined heat input to both Gas Turbines (S-6 and S-7) shall not exceed 838,480 MM BTU during any consecutive 12-month period. To demonstrate compliance with this part, the Permit Holder shall maintain the following records in a District-approved logbook:

Condition # 18773

FOR: S-6 GAS TURBINE WITH A-6 FOGGING SYSTEM AND FOR: S-7 GAS TURBINE WITH A-7 FOGGING SYSTEM

- a. Continuous monitoring and records of the landfill gas flow rate to the turbines recorded at least once every 15 minutes in accordance with Regulations 8-34-508 and 8-34-501.10.
- b. On a daily basis, measure and record the methane concentration, temperature, and pressure of the landfill gas at the landfill gas flow rate monitor.
- c. On a daily basis, measure and record the operating rate and operating time for each turbine.
- d. On a monthly basis, calculate and record the maximum daily heat input rate to each gas turbine and the total annual heat input rate (for the previous 12 consecutive months) to both gas turbines using the above records, the heat content (HHV) for methane of 1013 BTU/scf at 60 degrees F, and District-approved calculation procedures.

All records shall be maintained on site or shall be made readily available to District staff upon request for a period of at least 5 years from the date of entry. These record keeping requirements do not replace the record keeping requirements contained in any applicable rules or regulations.

(Basis: Cumulative Increase and Regulation 2-1-301)

9. The combustion chamber discharge temperature for each Gas Turbine shall be maintained between 700 and 1220 degrees Fahrenheit, averaged over any 3-hour period, unless the District grants permission to perform source testing outside of this permitted range in accordance with the Enforcement Division's Trial Testing Policy. If a source test demonstrates compliance with all applicable requirements at different minimum or maximum temperatures, the APCO may revise these temperature limits, in accordance with the procedures identified in Regulation 6-414 or 2-6-415, based on the following criteria. The minimum combustion chamber discharge temperature for S-6 and S-7 shall be equal to the average combustion chamber discharge temperature measured during a complying source test (NMHC and CO emission limits were met) minus 50 degrees F. The maximum combustion chamber discharge temperature for S-6 and S-7 shall be equal to the average combustion chamber discharge temperature measured during a complying source test (NOx emission limit was met) plus 50 degrees F. To demonstrate compliance with these temperature limits and Regulations 8-34-501.11 and 509, each Gas Turbine shall be equipped with a continuous temperature monitor and recorder, which will accurately measure the combustion chamber discharge temperature for each Gas Turbine.

(Basis: Regulations 8-34-301.4, 8-34-501.11 and 8-34-509)

75

Condition # 18773

FOR: S-6 GAS TURBINE WITH A-6 FOGGING SYSTEM AND FOR: S-7 GAS TURBINE WITH A-7 FOGGING SYSTEM

10. The concentration of total reduced sulfur (TRS) compounds in the landfill gas fuel for S-6 and S-7 shall not exceed 150 ppmv of TRS, expressed as H₂S. In order to demonstrate compliance with this part and 40 CFR 60.333(b), 60.334(h)(4), and the custom fuel sulfur monitoring schedule approved by EPA on July 6, 1994, the Permit Holder shall measure and record the sulfur content of the landfill gas on a monthly basis in accordance with 40 CFR 60.335(d) and during the annual performance test in accordance with 40 CFR 60.335(b)(10). This fuel sulfur data shall also be used as a surrogate for demonstrating compliance with the sulfur dioxide emission limits in Regulation 9-1-302 and 40 CFR 60.333(a).

(Basis: BACT, Regulation 9-1-302 and 40 CFR 60.333(a-b) and 60.334(h)(4))

- 11. In order to demonstrate compliance with Regulations 8-34-301.4, 8-34-412, 8-34-509, and 9-9-301.1; Parts 1, 2, and 8 above; and 40 CFR 60.332(a)(2); the Permit Holder shall ensure that a District approved source test is conducted annually on each Gas Turbine (S-6 and S-7). The annual source test shall be conducted under normal operating conditions and shall determine the following:
 - a. landfill gas flow rate to each gas turbine (dry basis);
 - b. concentrations (dry basis) of carbon dioxide (CO₂), nitrogen (N₂), oxygen (O₂), methane (CH₄), and total non-methane organic compounds (NMOC) in the landfill gas;
 - c. stack gas flow rate from each gas turbine (dry basis);
 - d. concentrations (dry basis) of NO_x , CO, NMOC, and O_2 in the stack gas;
 - e. NMOC destruction efficiency achieved by each turbine;
 - f. average temperature in the combustion chamber discharge of each gas turbine during the test period;
 - g. emission rates in pounds per MM BTU of NO_x (calculated as NO_2) and CO.

Each annual source test shall be conducted no later than 12 months after the previous source test on that device. The Source Test Section of the District shall be contacted to obtain approval of the source test procedures at least 14 days in advance of each source test. The Source Test Section shall be notified of the scheduled test date at least 7 days in advance of each source test. The procedures and notification may also be submitted in a combined document at least 14 days in advance of each source test. The source test report shall be submitted to the Compliance and Enforcement Division and the Source Test Section within 60 days of the test date.

(Basis: Cumulative Increase, Regulations 2-1-301, 8-34-301.4, 8-34-412, 8-34-509, and 9-9-301.1, and 40 CFR 60.8, 60.332(a)(2) and 60.335)

Condition # 19235

FOR: S-2 ALTAMONT LANDFILL - WASTE DECOMPOSITION PROCESS, EQUIPPED WITH LANDFILL GAS COLLECTION SYSTEM, AND ABATED BY A-15 LANDFILL GAS FLARE AND A-16 LANDFILL GAS FLARE;

- 1. The S-2 Altamont Landfill (Fill Area 1) shall be equipped with a landfill gas collection system, which shall be operated continuously as defined in Regulation 8-34-219, unless the Permit Holder complies with all applicable provisions of Regulation 8, Rule 34, Section 113. Individual wells, collectors, and adjustment valves shall not be disconnected, removed, or completely closed, without prior written authorization from the District, unless the Permit Holder complies with all applicable provisions of Regulation 8, Rule 34, Sections 113, 116, 117, or with Part 1c below. The gas collection system shall also be operated in accordance with the wellhead requirements described in Part 1d. The Regulation 8-34-408 Collection and Control System Design Plan for Fill Area 2 shall be submitted to the District in the form of a permit application for a Change of Conditions at least 30 days prior to the date on which Fill Area 2 is expected to reach 1 million tons of decomposable material in place. (Basis: Regulations 8-34-301.1, 8-34-303, 8-34-304, 8-34-305, and 8-34-404)
 - a. The Permit Holder has been issued a Permit to Operate for the landfill gas collection system components listed below as of June 14, 2018. Well and collector locations are as described in detail in Permit Application # 23198.
 - The authorized number of landfill gas collection system components is the baseline count listed below plus any components installed and minus any components decommissioned pursuant to subpart 1b, as evidenced by start-up and decommissioning notification letters submitted to the District.
 - 111 vertical wells
 - 2 horizontal trench collector (shredded tires may be used as fill material)
 - 1 leachate collection system clean-out riser
 - b. The Permit Holder has been authorized to make the landfill gas collection system alterations described below pursuant to Permit Application # 27839 and updated as of June 14, 2018. All collection system alterations shall comply with subparts 1b(i-vii) below.
 - i. The authorized collection system alterations are:
 - Install up to 84 vertical wells
 - Permanently decommission up to 47 vertical wells
 - Install up to 22 horizontal trench collectors

Condition # 19235

FOR: S-2 ALTAMONT LANDFILL - WASTE DECOMPOSITION PROCESS, EQUIPPED WITH LANDFILL GAS COLLECTION SYSTEM, AND ABATED BY A-15 LANDFILL GAS FLARE AND A-16 LANDFILL GAS FLARE;

S-43 ALTAMONT LANDFILL - WASTE AND COVER MATERIAL DUMPING; AND S-44 ALTAMONT LANDFILL - EXCAVATING, BULLDOZING, AND COMPACTING ACTIVITIES:

- Permanently decommission up to 11 horizontal trench collectors
- Modify wellhead monitoring locations, as needed, provided that each landfill gas collection system component identified in Part 1a and each new collection system component installed per Part 1b is adequately represented by a wellhead monitoring location. The Permit Holder shall maintain documentation on site that identifies all landfill gas collection system components that are represented by each wellhead monitoring location.
- ii. The Permit Holder shall apply for and receive a Change of Conditions before altering the landfill gas collection components described subpart 1a. Installing, altering, or permanently decommissioning a vertical well, horizontal collector, or other gas collection component is subject to this requirement, unless this change constitutes a replacement as defined in subpart 1b(iii) below.
- iii. Replacement of landfill gas collection system components with identical or functionally equivalent components will not be deemed an alteration and will not be subject to subpart 1b(ii) under the following circumstances. If a well or collector will be shut down and replaced by a new well or collector in essentially the same location as the old component and this decommission/installation will be accomplished in accordance with Regulations 8-34-117 and 8-34-118, then this activity shall be considered a component replacement that is not subject to the Authority to Construct requirement. For each individual well or collector replacement, this subpart authorizes a maximum vacuum disconnection time of five consecutive days for compliance with Regulation 8-34-117.5. The disconnected component and the new component shall not be counted toward the subpart 1b(i) limits; the numbers of replacement wells and replacement collectors are not limited. Alterations, repairs, or replacements of non-perforated piping sections (such as risers, laterals, or header pipes), piping connectors, or valves are not subject to an Authority to Construct requirement.

VI. Permit Conditions

Condition # 19235

FOR: S-2 ALTAMONT LANDFILL - WASTE DECOMPOSITION PROCESS, EQUIPPED WITH LANDFILL GAS COLLECTION SYSTEM, AND ABATED BY A-15 LANDFILL GAS FLARE AND A-16 LANDFILL GAS FLARE;

S-43 ALTAMONT LANDFILL - WASTE AND COVER MATERIAL DUMPING; AND S-44 ALTAMONT LANDFILL - EXCAVATING, BULLDOZING, AND COMPACTING ACTIVITIES:

- iv. At least three days prior to initiating operation of a well or collector installed pursuant to subpart 1b, the Permit Holder shall submit a start-up notice to the District that contains the component ID number for each new well or collector and the anticipated initial start-up date for each new component.
- v. For each well or collector that is permanently decommissioned after [insert date of approval of this condition change], the Permit Holder shall submit a decommissioning notice to the District within no later than three working days after the component was disconnected from vacuum system. This decommissioning notice shall contain the component ID for each well or collector that was decommissioned, the date and time that each component was disconnected from the vacuum system, and the reason the component was decommissioned.
- vi. Within six months of installing a new component or permanently decommissioning an existing component, the Permit Holder shall prepare an updated map of the landfill gas collection system that identifies the ID numbers and locations of all operable wells and collectors. On this map or in accompanying documentation, the Permit Holder shall summarize all component changes that were made since the last map was prepared. The previous collection system map, the updated collection system map, and the component change summary shall be provided to District staff upon request.

79

Condition # 19235

FOR: S-2 ALTAMONT LANDFILL - WASTE DECOMPOSITION PROCESS, EQUIPPED WITH LANDFILL GAS COLLECTION SYSTEM, AND ABATED BY A-15 LANDFILL GAS FLARE AND A-16 LANDFILL GAS FLARE;

S-43 ALTAMONT LANDFILL - WASTE AND COVER MATERIAL DUMPING; AND S-44 ALTAMONT LANDFILL - EXCAVATING, BULLDOZING, AND COMPACTING ACTIVITIES:

- vii. If the Permit Holder has a net reduction (number of decommissioned components minus the number of installed components) of more than five components within a 120-day period, the Permit Holder shall submit a more comprehensive decommissioning notice to the District. In addition to the information required by subpart 1b(v), this comprehensive decommissioning notice shall include the maps and documentation required by subpart 1b(vi), shall identify all component changes that have occurred but that are not included on the most recently updated map, shall identify any components that are temporarily disconnected from vacuum pursuant to subpart 1c, shall provide estimated vacuum reconnection dates for these components, shall include a list of all well installations that are expected to occur within the next 120 days, and shall discuss the reasons why this reduction in gas collection components is not expected to result in surface emission leaks. Upon request, the Permit Holder shall provide wellhead monitoring data, surface leak monitoring data, records of repair attempts made to date, and other information to support the need for a net collection component reduction of more than five wells. The District may require additional surface monitoring to verify that this net component reduction is not causing landfill surface leaks. The District will notify the Permit Holder in writing of any additional surface monitoring that is required pursuant to this subpart.
- c. The Permit Holder may temporarily disconnect individual wells or collectors from the vacuum system, provided that all requirements of this subpart are satisfied. (Basis: Regulation 8-34-404)
 - i. No more than five (5) landfill gas collection system components (wells or collectors) may be temporarily disconnected from the vacuum system at any one time pursuant to subpart 1c.
 - ii. For each individual well or collector that is disconnected from the vacuum system pursuant to subpart 1c, the total vacuum system disconnection time shall not exceed 120 days during any 12-month period.

VI. Permit Conditions

Condition # 19235

FOR: S-2 ALTAMONT LANDFILL - WASTE DECOMPOSITION PROCESS, EQUIPPED WITH LANDFILL GAS COLLECTION SYSTEM, AND ABATED BY A-15 LANDFILL GAS FLARE AND A-16 LANDFILL GAS FLARE;

- iii. Collection system components that are disconnected from the vacuum system are not subject to wellhead limits (Regulation 8-34-305 or Part 1d, as applicable) or monthly wellhead monitoring requirements (Regulation 8-34-505) during this vacuum disconnection time.
- iv. Wells or collectors that are temporarily disconnected from the vacuum system continue to be subject to the component leak limit (Regulation 8-34-301.2) and the quarterly leak testing requirement (Regulation 8-34-503) at all times. In addition, the Permit Holder shall conduct the following component leak monitoring at each component that has been disconnected from the vacuum system pursuant to subpart 1c: test for component leaks using the procedures identified in Regulation 8-34-602 within 10 calendar days of disconnection from vacuum and again within 1 month of disconnection from vacuum. If a component leak is detected at the well, the Permit Holder shall take all steps necessary to reduce the leak below the applicable limit, including reconnecting the well to the vacuum system, if no other corrective action measures are successful within the time frames allowed by Rule 34.
- v. For each well disconnection event, the Permit Holder shall record each affected well ID number, all well disconnection dates and times, all well reconnection dates and times, all related monitoring dates and monitoring results in a District approved log. This log shall also include an explanation of why the temporary well shut down was necessary and shall describe all adjustments or repairs that were made in order to allow this well to operate continuously, to reduce leaks, or to achieve compliance with an applicable limit. All records shall be retained for a minimum of five years and shall be made available to District staff upon request.

Condition # 19235

FOR: S-2 ALTAMONT LANDFILL - WASTE DECOMPOSITION PROCESS, EQUIPPED WITH LANDFILL GAS COLLECTION SYSTEM, AND ABATED BY A-15 LANDFILL GAS FLARE AND A-16 LANDFILL GAS FLARE;

- d. Each landfill gas collection system component listed in Part 1a shall be operated in compliance with the wellhead limits of Regulation 8-34-305, unless an alternative wellhead limit has been approved for that component and the operator complies with all of the additional requirements identified in this subpart. Components that are subject to an alternative wellhead limit may still use the Regulation 8-34-414 repair schedule for operator discovered excesses of the alternative limit; however, invoking this repair schedule does not replace the monitoring requirements described in Parts 1d(ii-viii). (Basis: Regulations 8-34-305 and 8-34-414)
 - i. For each of the wells identified in Part 1d(ii), the Regulation 8-34-305.2 wellhead temperature limit does not apply, and the landfill gas temperature at each wellhead shall not exceed 145 degrees F.
 - ii. The wells that are subject to the Part 1d(i) alternative wellhead temperature limit are:
 #486, #449, #474, #475, #477, #484, #487, #497, #500, #501, #503,
 #513, #515, #519, #523,#524, #526, #547, #548, #554, #557, #559,
 #564, #565, #566, #568, #569, #570, #571, #574, #577, #579, #592,
 #599, #601, #603, #605, #609, #611, #612, #633, #639, #646, #652,
 #657, #667, #718, #719, #720, #721, #723, #724, #732, and #733.
 If any other component has a wellhead temperature of 131 degrees
 F or higher, the operator may elect to add this component to the above list of alternative temperature limit wells by satisfying all of the following requirements:
 - The wellhead temperature shall not exceed 145 degrees F.
 - The carbon monoxide (CO) concentration in the wellhead gases shall not exceed 500 ppmv.
 - Prior to adding a component to the list in this subpart, the operator shall monitor the gas in the component for CO concentration at least two times, with no more than 15 days between tests. CO monitoring shall continue on a monthly basis, or more frequently if required by subparts 1d(iv-vii), until the operator is allowed to discontinue CO monitoring per subpart 1d(vii).
 - The operator shall comply with all applicable monitoring and record keeping requirements in subparts 1d(iii-viii).

Condition # 19235

FOR: S-2 ALTAMONT LANDFILL - WASTE DECOMPOSITION PROCESS, EQUIPPED WITH LANDFILL GAS COLLECTION SYSTEM, AND ABATED BY A-15 LANDFILL GAS FLARE AND A-16 LANDFILL GAS FLARE;

- The component shall not exceed any wellhead limit other than temperature and shall have had no excesses of wellhead limits (other than temperature) during the 120 days prior to adding this component to the list in this subpart.
- Within 30 days of adding a component to the list in this subpart, the operator shall notify the District in writing that the operator is requesting to add the component to the Part 1d(ii) list of alternative temperature limit wells. This notification shall include the well ID number, a map of the collection system to identify the location of this well, and the dates and results of all monitoring conducted on the well to verify that the above requirements have been satisfied.
- If the Regulation 8-34-414 repair schedule has been invoked for the wellhead temperature excess, and the operator has met the requirements of Sections 414.1 and 414.2, then compliance with the requirements of this subpart shall be deemed an acceptable resolution of the wellhead temperature excess in lieu of the collection system expansion specified in Sections 414.3 and 414.4.
- iii. The operator shall demonstrate compliance with the alternative wellhead temperature limit in Part 1d(i) by monitoring and recording the temperature of the landfill gas in each wellhead on a monthly basis, in accordance with Regulations 8-34-501.4, 8-34-501.9, and 8-34-505.
- iv. If the temperature of the landfill gas in a wellhead exceeds 140 degrees F, the operator shall investigate the possibility of a subsurface fire at the wellhead by monitoring for CO concentration in the wellhead gases and by searching for smoke, smoldering odors, combustion residues, and other fire indicators in the wellhead and in the landfill area near this wellhead. Within 5 days of triggering a fire investigation, the operator shall measure the CO concentration in the landfill gas at the wellhead using a portable CO monitor or an EPA approved test method. CO monitoring shall continue according to the frequency specified in subparts 1d(v-vii).

VI. Permit Conditions

Condition # 19235

FOR: S-2 ALTAMONT LANDFILL - WASTE DECOMPOSITION PROCESS, EQUIPPED WITH LANDFILL GAS COLLECTION SYSTEM, AND ABATED BY A-15 LANDFILL GAS FLARE AND A-16 LANDFILL GAS FLARE;

- v. If the CO concentration is greater than 500 ppmv, the operator shall immediately take all steps necessary to prevent or extinguish the subsurface fire, including disconnecting the well from the vacuum system if necessary. If the well is not disconnected from the vacuum system or upon reconnecting a well to the vacuum system, the operator shall monitor the well for CO concentration, wellhead temperature, and other fire indicators on at least a weekly basis until the CO concentration drops to 500 ppmv or less.
- vi. If the CO concentration is less than or equal to 500 ppmv but greater than 100 ppmv, the operator shall monitor for CO concentration at least twice per month (not less than once every 15 days) until the CO concentration drops to 100 ppmv or less. Wellhead temperature and other fire indicators shall be evaluated at each of these semimonthly-monitoring events.
- vii. If the CO concentration is less than or equal to 100 ppmv, the operator shall monitor for CO concentration on a monthly basis. CO monitoring may be discontinued if three consecutive CO measurements are 100 ppmv or less and the wellhead temperature during each of these three monitoring events is 140 degrees F or less. If a component has three or more CO measurements of 100 ppmv or less but the wellhead temperature was greater than 140 degrees F, the operator must receive written approval from the District before discontinuing the monthly CO monitoring at that component.
- viii. The permit holder shall record the dates and results of all monitoring events required by this subpart in a District approved log. If Part 1d(v) applies, the operator shall also describe all actions taken to prevent or extinguish the fire.

VI. Permit Conditions

Condition # 19235

FOR: S-2 ALTAMONT LANDFILL - WASTE DECOMPOSITION PROCESS, EQUIPPED WITH LANDFILL GAS COLLECTION SYSTEM, AND ABATED BY A-15 LANDFILL GAS FLARE AND A-16 LANDFILL GAS FLARE;

- 2. All collected landfill gas from Fill Area 1 shall be vented to properly operating landfill gas control equipment. The Permit Holder may operate any combination of landfill gas control devices or landfill gas processing equipment, including: A-15 Landfill Gas Flare, A-16 Landfill Gas Flare, S-6 Gas Turbine, S-7 Gas Turbine, or S-210 Liquefied Natural Gas Plant, provided that the Permit Holder collects landfill gas at all times at a sufficient rate to prevent excesses of any applicable landfill surface leak limit or any applicable component leak limit. In the event of a shut-down or malfunction of one of these devices, the Permit Holder shall ensure that all landfill gas that is normally fired or processed by that device is diverted to one or more of the other control devices listed above. Raw landfill gas shall not be vented to the atmosphere, except for unavoidable landfill gas emissions that occur during collection system installation, maintenance, or repair that is performed in compliance with Regulation 8, Rule 34, Sections 113, 116, 117, or 118 and for inadvertent component or surface leaks that do not exceed the limits specified in 8-34-301.2 or 8-34-303. (Basis: Regulations 8-34-301 and 8-34-303)
- 3. The A-15 and A-16 Landfill Gas Flares shall be fired on landfill gas collected from Fill Area 1 of the S-2 Altamont Landfill. The permit holder shall apply for and receive a Change of Permit Conditions before using these flares to control landfill gas collected from the proposed Fill Area 2. Propane may be used as a start-up fuel only. Landfill gas condensate may be injected into these flares, provided that the flares comply with all limits in Parts 3-10 and any other applicable emission limits during all times that condensate is being injected into these flares. (Basis: Regulation 2-1-301)
 - a. The condensate injection rate at A-15 shall not exceed 4320 gallons during any day, and
 - b. The condensate injection rate at A-16 shall not exceed 7200 gallons during any day.

Condition # 19235

FOR: S-2 ALTAMONT LANDFILL - WASTE DECOMPOSITION PROCESS, EQUIPPED WITH LANDFILL GAS COLLECTION SYSTEM, AND ABATED BY A-15 LANDFILL GAS FLARE AND A-16 LANDFILL GAS FLARE;

S-43 ALTAMONT LANDFILL - WASTE AND COVER MATERIAL DUMPING; AND S-44 ALTAMONT LANDFILL - EXCAVATING, BULLDOZING, AND COMPACTING ACTIVITIES:

- 4. The A-15 and A-16 Landfill Gas Flares shall comply with all of the heat input limits specified below. (Basis: Offsets and Cumulative Increase)
 - a. For A-15, the heat input rate shall not exceed 1704 million BTU per day.
 - b. For A-15, the heat input rate shall not exceed 621,785 million BTU per year.
 - c. For A-16, the heat input rate shall not exceed 3168 million BTU per day.
 - d. For A-16, the heat input rate shall not exceed 1,156,320 million BTU per year.
- 5. The Landfill Gas Flares (A-15 and A-16) shall be equipped with both local and remote alarm systems. The local and remote alarms shall be activated whenever the total landfill gas collection for the site is less than the target landfill gas collection rate in Part 2a. When operation of A-15 or A-16 is necessary to meet the target landfill gas collection rate, the local and remote alarms shall be activated if the flare shuts down unexpectedly or if the combustion zone temperature is less than the minimum temperature required by Part 10 below. (Basis: Regulation 8-34-301)
- 6. Each Landfill Gas Flare (A-15 and A-16) shall be equipped with one flow meter and one recorder meeting the requirements of Regulation 8-34-508. (Basis: Offsets, Cumulative Increase, and Regulations 2-1-301, 8-34-301, 8-34-501.10, and 8-34-508)
- 7. Nitrogen oxide (NO_x) emissions from each Landfill Gas Flare (A-15 and A-16) shall comply with the following emission limits:
 - a. For A-15, the exhaust concentration shall not exceed 45 ppmv of NO_x , corrected to 3% oxygen, dry basis, unless the permit holder can demonstrate that the emission rate does not exceed 0.06 pounds of NO_x (calculated as NO_2) per million BTU.
 - b. For A-16, the exhaust concentration shall not exceed 45 ppmv of NO_x , corrected to 3% oxygen, dry basis, unless the permit holder can demonstrate that the emission rate does not exceed 0.06 pounds of NO_x (calculated as NO_2) per million BTU.

(Basis: RACT and Offsets)

Condition # 19235

ACTIVITIES:

FOR: S-2 ALTAMONT LANDFILL - WASTE DECOMPOSITION PROCESS, EQUIPPED WITH LANDFILL GAS COLLECTION SYSTEM, AND ABATED BY A-15 LANDFILL GAS FLARE AND A-16 LANDFILL GAS FLARE;
S-43 ALTAMONT LANDFILL - WASTE AND COVER MATERIAL DUMPING; AND S-44 ALTAMONT LANDFILL - EXCAVATING, BULLDOZING, AND COMPACTING

- 8. Carbon monoxide (CO) emissions from each Landfill Gas Flare (A-15 and A-16) shall comply with the following emission limits:
 - a. For A-15, the exhaust concentration shall not exceed 369 ppmv of CO, corrected to 3% oxygen, dry basis, unless the permit holder can demonstrate that the emission rate does not exceed 0.30 pounds of CO per million BTU.
 - b. For A-16, the exhaust concentration shall not exceed 246 ppmv of CO, corrected to 3% oxygen, dry basis, unless the permit holder can demonstrate that the emission rate does not exceed 0.20 pounds of CO per million BTU.

(Basis: RACT, BACT, and Cumulative Increase)

- 9. The Landfill Gas Flares (A-15 and A-16) shall comply with either the destruction efficiency or outlet concentration limit specified in Regulation 8-34-301.3. (Basis: Offsets, Cumulative Increase, and Regulation 8-34-301.3)
- 10. For each Landfill Gas Flare (A-15 and A-16), the combustion zone temperature shall be maintained at the minimum limits in 10a-b. If a source test demonstrates compliance with all applicable requirements at a different temperature the APCO may revise these minimum combustion zone temperature limits in accordance with the procedures identified in Regulations 2-6-414 or 2-6-415 and the following criteria. The minimum combustion zone temperature for a flare (T_{min}) shall be equal to the average combustion zone temperature determined during the most recent complying source test (T_{avg}) minus 50 degrees F, provided that the minimum combustion zone temperature is not less than 1400 degrees F:

 $T_{min} = T_{avg} - 50$, for $T_{avg} >= 1450$ degrees F $T_{min} = 1400$, for $T_{avg} < 1450$ degrees F

(Basis: RACT, BACT, Offsets, Cumulative Increase, TBACT, and Regulations 2-5-301 and 8-34-301.3)

- a. For A-15, the combustion zone temperature shall be maintained at a minimum of 1481 degrees Fahrenheit, averaged over any 3-hour period during all times that landfill gas is vented to this flare.
- b. For A-16, the combustion zone temperature shall be maintained at a minimum of 1509 degrees Fahrenheit, averaged over any 3-hour period during all times that landfill gas is vented to this flare.

VI. Permit Conditions

Condition # 19235

FOR: S-2 ALTAMONT LANDFILL - WASTE DECOMPOSITION PROCESS, EQUIPPED WITH LANDFILL GAS COLLECTION SYSTEM, AND ABATED BY A-15 LANDFILL GAS FLARE AND A-16 LANDFILL GAS FLARE;

S-43 ALTAMONT LANDFILL - WASTE AND COVER MATERIAL DUMPING; AND S-44 ALTAMONT LANDFILL - EXCAVATING, BULLDOZING, AND COMPACTING ACTIVITIES:

- 11. The concentration of total reduced sulfur compounds in the collected landfill gas shall not exceed 200 ppmv (dry) expressed as hydrogen sulfide (H₂S). In order to demonstrate compliance with this part, the Permit Holder shall measure the total sulfur content in collected landfill gas in accordance with the monitoring schedule identified in Condition # 18773, Part 10. The landfill gas sample shall be taken from the main landfill gas header.
 - (Basis: Regulation 9-1-302 and Cumulative Increase)
- *12. Prior to initiation of gas collection from Fill Area 2, the Permit Holder shall submit a permit application for a Change of Permit Conditions, if any site-specific landfill gas characterization test indicates that the landfill gas at this site contains any of the following compounds at a level greater than the concentration listed below. The Permit Application shall be submitted to the Engineering Division, within 45 days of receipt of test results indicating a concentration above the levels listed below. Upon initiation of landfill gas collection from Fill Area 2, the concentrations of toxic air contaminants in landfill gas collected from either fill area of the Altamont Landfill shall not exceed the concentrations listed below. An excess of a Part 12 TAC concentration limit shall not be deemed a violation of this part, if the Permit Holder complies with the requirements in Part 12a and demonstrates to the District's satisfaction that increasing the concentration level of a compound will satisfy either Part 12b or Part 12c.
 - a. Within 45 days of submittal of a source test report indicating a concentration above the levels listed below, the Permit Holder shall submit a permit application to the Engineering Division of the District for a Change of Permit Conditions to increase the concentration level for that compound.
 - b. The Permit Holder shall demonstrate to the District's satisfaction that the requested higher concentration level for a compound will not result in an increase of the permitted emission level for that compound from the S-2 Altamont Landfill, as identified in the table below.

88

Condition # 19235

FOR: S-2 ALTAMONT LANDFILL - WASTE DECOMPOSITION PROCESS, EQUIPPED WITH LANDFILL GAS COLLECTION SYSTEM, AND ABATED BY A-15 LANDFILL GAS FLARE AND A-16 LANDFILL GAS FLARE;
S-43 ALTAMONT LANDFILL - WASTE AND COVER MATERIAL DUMPING; AND S-44 ALTAMONT LANDFILL - EXCAVATING, BULLDOZING, AND COMPACTING ACTIVITIES:

c. If the higher concentration level will result in an increase of the permitted emission level for one or more compounds, but this emission increase is accompanied by decreases in the permitted emission levels for one or more toxic air contaminants, the Permit Holder shall demonstrate to the District's satisfaction that the proposed emission changes will not result in a project risk that exceeds a limit in Regulation 2-5-302.

(Basis: Regulation 2-5-302)

	Concentration in Limit for Fugiti	
	Collected LFG	Emissions from S-2
Compound	(ppbv)	pounds/year
Acrylonitrile	300	70
Benzene	10,000	3,430
Benzylchloride	500	278
Carbon Tetrachloride	100	68
Chloroform	100	52
1,4 Dichlorobenzene	2,600	1,678
Ethyl Benzene	23,000	10,987
Ethylene Dichloride	2,500	1,086
Ethylidene Dichloride	1,000	435
Isopropyl Alcohol	200,000	54,782
Methyl Alcohol	600,000	84,427
Methylene Chloride	12,000	4,476
Methyl Ethyl Ketone	200,000	63,331
Perchloroethylene	6,000	43,705
1,1,2,2 Tetrachloroethane	400	295
Toluene	200,000	80,925
Trichloroethylene	1,600	923
Vinyl Chloride	1,000	274
Xylenes	90,000	41,960

Condition # 19235

FOR: S-2 ALTAMONT LANDFILL - WASTE DECOMPOSITION PROCESS, EQUIPPED WITH LANDFILL GAS COLLECTION SYSTEM, AND ABATED BY A-15 LANDFILL GAS FLARE AND A-16 LANDFILL GAS FLARE;

S-43 ALTAMONT LANDFILL - WASTE AND COVER MATERIAL DUMPING; AND S-44 ALTAMONT LANDFILL - EXCAVATING, BULLDOZING, AND COMPACTING ACTIVITIES:

- 13. In order to demonstrate compliance with Regulation 8, Rule 34, Sections 301.3 and 412 and Parts 7 through 12 above, the Permit Holder shall ensure that a District approved source test is conducted every three years on the A-15 and annually on the A-16 Landfill Gas Flares. The source tests shall be conducted while the flare is operating at or near maximum operating rates and for each of the following operating conditions: (a) while the flare in burning landfill gas without any condensate injection, (b) while the flare is burning landfill gas and condensate is being injected into the flare at or near the maximum injection rate, and (c) while the A-16 flare is controlling emissions from the S-210 LNG Plant. Each source test shall determine the following:
 - a. landfill gas flow rate to the flare (dry basis);
 - b. concentrations (dry basis) of carbon dioxide (CO₂), nitrogen (N₂), oxygen (O₂), total hydrocarbons (THC), methane (CH₄), and total non-methane organic compounds (NMOC) in the landfill gas;
 - c. stack gas flow rate from the flare (dry basis);
 - d. concentrations (dry basis) of NO_x , CO, NMOC, and O_2 in the flare stack gas;
 - e. NMOC destruction efficiency achieved by the flare; and

90

f. average combustion zone temperature of the flare during the test period.

Each annual source test shall be conducted no later than 12 months after the previous source test on that device. Testing while condensate is being injected is not required, if condensate was not injected into the flare during any of the 12 consecutive months prior to the source test date. If A-15 operates more than 240 hours during any consecutive 12-month period, or if testing at A-15 demonstrates non-compliance with any applicable limit, the owner/operator shall ensure that A-15 is tested within 12-months of either event. Testing frequency may revert back to once every three years after demonstrating that A-15 operating time is less than 240 hours per 12-month period and demonstrating compliance with CCR section 95464(b)(4)(A). The Source Test Section of the District shall be contacted to obtain approval of the source test procedures at least 14 days in advance of each source test. The Source Test Section shall be notified of the scheduled test date at least 7 days in advance of each source test. The procedures and notification may also be submitted in a combined document at least 14 days in advance of each source test. The source test report shall be submitted to the Compliance and Enforcement Division and the Source Test Section within 60 days of the test date.

Condition # 19235

FOR: S-2 ALTAMONT LANDFILL - WASTE DECOMPOSITION PROCESS, EQUIPPED WITH LANDFILL GAS COLLECTION SYSTEM, AND ABATED BY A-15 LANDFILL GAS FLARE AND A-16 LANDFILL GAS FLARE;

S-43 ALTAMONT LANDFILL - WASTE AND COVER MATERIAL DUMPING; AND S-44 ALTAMONT LANDFILL - EXCAVATING, BULLDOZING, AND COMPACTING ACTIVITIES:

(Basis: RACT, Offsets, Cumulative Increase, TBACT, and Regulations 2-5-301, 8-34-301.3 and 8-34-412)

- 14. The Permit Holder shall conduct a characterization of the landfill gas concurrent with the annual source test required by Part 13 above. The landfill gas sample shall be drawn from the main landfill gas header.
 - a. In addition to the compounds listed in Part 13b, the landfill gas shall be analyzed for the organic compounds listed below, except that acrylonitrile testing shall be conducted once every four years instead of annually. All concentrations shall be reported on a dry basis. The test report shall be submitted to the Compliance and Enforcement Division and the Source Test Section within 60 days of the test date. (Basis: AB-2588 Air Toxics Hot Spots Act, Cumulative Increase, and Regulations 2-5-302 and 8-34-412)

Organic Compounds

acrylonitrile benzene benzyl chloride carbon tetrachloride chloroform 1,4 dichlorobenzene ethylbenzene ethylene dichloride (1,2 dichloroethane) ethylidene dichloride (1,1 dichloroethane) isopropyl alcohol methyl alcohol methylene chloride methyl ethyl ketone perchloroethylene 1,1,2,2 tetrachloroethane toluene trichloroethylene vinyl chloride xylenes

VI. Permit Conditions

Condition # 19235

FOR: S-2 ALTAMONT LANDFILL - WASTE DECOMPOSITION PROCESS, EQUIPPED WITH LANDFILL GAS COLLECTION SYSTEM, AND ABATED BY A-15 LANDFILL GAS FLARE AND A-16 LANDFILL GAS FLARE;
S-43 ALTAMONT LANDFILL - WASTE AND COVER MATERIAL DUMPING; AND

S-43 ALTAMONT LANDFILL - WASTE AND COVER MATERIAL DUMPING; AND S-44 ALTAMONT LANDFILL - EXCAVATING, BULLDOZING, AND COMPACTING ACTIVITIES:

- The Permit Holder shall demonstrate compliance with the landfill gas b. NMOC concentration limit in part 17a by measuring the NMOC concentration in landfill gas collected from the S-2 Altamont Landfill at least twice during each calendar year. One of the two required annual tests shall be conducted concurrent with subpart a above. For each consecutive three-year period, the sample collection dates for the second annual sample shall be varied to ensure that at least one sample is collected during each quarter of a year (one sample shall be collected during January-March, one during April-June, one during July-September, and one during October-December). Analytical results from District approved source tests that were conducted for other purposes may be used to satisfy the requirements of this part provided the sample was tested for both total NMOC concentration and methane concentration using APCO approved test methods. The measured NMOC concentration shall be corrected to 50% methane using the following equation: corrected NMOC concentration = 0.5 * measured NMOC concentration / measured methane concentration. For each landfill gas NMOC concentration test, the Permit Holder shall maintain records of the sample date, the measured NMOC concentration, the measured methane concentration, and the corrected NMOC concentration. The Permit Holder shall determine and record the average of the corrected NMOC concentration for each calendar quarter (if multiple tests are available for any one particular quarter) and the rolling three-year average of these quarterly average NMOC concentrations. All records shall be maintained on site or shall be made readily available to District staff upon request for at least 5 years from the date of entry.
- 15. In order to demonstrate compliance with the above conditions, the Permit Holder shall maintain the following records in a District approved logbook. All records shall be maintained on site or shall be made readily available to District staff upon request for a period of at least 5 years from the date of entry. These record keeping requirements do not replace the record keeping requirements contained in any applicable rules or regulations. (Basis: Offsets, Cumulative Increase, 2-6-501, 8-34-301, and 8-34-501)

VI. Permit Conditions

Condition # 19235

FOR: S-2 ALTAMONT LANDFILL - WASTE DECOMPOSITION PROCESS, EQUIPPED WITH LANDFILL GAS COLLECTION SYSTEM, AND ABATED BY A-15 LANDFILL GAS FLARE AND A-16 LANDFILL GAS FLARE;

S-43 ALTAMONT LANDFILL - WASTE AND COVER MATERIAL DUMPING; AND S-44 ALTAMONT LANDFILL - EXCAVATING, BULLDOZING, AND COMPACTING ACTIVITIES:

- a. For the Landfill Gas Flares (A-15 and A-16), record the date and time for each start-up and shut-down of the flare and the reason for each shut-down.
- b. Summarize the operating hours for the each Landfill Gas Flare (A-15 and A-16), on a daily basis.
- c. Calculate and record, on a monthly basis, the maximum daily and total monthly heat input to each Landfill Gas Flare (A-15 and A-16) based on operating hours for the flare, the landfill gas flow rate recorded pursuant to Part 6, the average methane concentration in the landfill gas as determined by the most recent source test, and a high heating value for methane of 997.7 BTU/ft³ of landfill gas at 68 degrees F and 1 atmosphere.
- d. Record the total amount of condensate (gallons per day) injected into each Landfill Gas Flare (A-15 and A-16) for each day that condensate is injected into a flare, and summarize these records on a monthly basis.
- e. Maintain records of all test dates and test results performed to maintain compliance with Parts 12 and 13 or with any applicable rule or regulation.

93

16. DELETED

VI. Permit Conditions

Condition # 19235

FOR: S-2 ALTAMONT LANDFILL - WASTE DECOMPOSITION PROCESS, EQUIPPED WITH LANDFILL GAS COLLECTION SYSTEM, AND ABATED BY A-15 LANDFILL GAS FLARE AND A-16 LANDFILL GAS FLARE;

- 17. This part becomes effective upon the date of the District's approval of a Change of Conditions for the Fill Area 2 Expansion of the S-2 Altamont Landfill. In order to assure compliance with District offsetting requirements for precursor organic compound (POC) emission increases at the S-2 Altamont Landfill, the Permit Holder shall submit the required amount of District approved POC emission reduction credits (ERC) in accordance with the schedule identified in Part 17a and shall comply with all associated limits, monitoring, record keeping, and reporting requirements in Parts 17a. The fugitive POC emissions, the associated amount of ERC credits due, and other related limits shall be reviewed and, if necessary, modified, in accordance with the procedures specified in Part 17b. (Basis: Regulation 2-2-302)
 - a. The Permit Holder shall comply with all requirements and limits identified in the table below, unless the Permit Holder has submitted, in accordance with the provisions of Part 17b, a permit application to request a modification of a specific ERC amount or due date or a specific limit. This permit application submittal will temporarily suspend the specific ERC requirement or limit from the date of the application submittal until the District makes a final decision on the change request. The permit application submittal does not suspend any monitoring, record keeping, or reporting requirements in this subpart.
 - i. By no later than the due date specified in column 1 of the table, the Permit Holder shall surrender the total amount of POC ERCs indicated in column 2 of the table. These ERCs shall be in the form of District approved banking certificates for POC emission reduction credits. The banking certificate submittal shall be addressed to the attention of the Director of the Engineering Division, BAAQMD, 375 Beale Street, San Francisco, CA 94105.
 - ii. The limits identified in columns 3 through 6 of the table apply to the S-2 Altamont Landfill (Fill Areas 1 and 2 combined). These limits become effective upon the date identified in column 1 and remain in effect until the Permit Holder has surrendered the amount of ERCs required for the subsequent set of limits, unless the limit has been temporarily suspended as specified in Part 17a.

VI. Permit Conditions

Condition # 19235

FOR: S-2 ALTAMONT LANDFILL - WASTE DECOMPOSITION PROCESS, EQUIPPED WITH LANDFILL GAS COLLECTION SYSTEM, AND ABATED BY A-15 LANDFILL GAS FLARE AND A-16 LANDFILL GAS FLARE;

- iii. The Permit Holder shall demonstrate compliance with the fugitive POC emission limits in column 3 of the table by complying with: the limits in columns 4, 5, and 6, the record keeping requirements in Part 22i, the monitoring requirements in Part 14b, and the fugitive POC emissions reassessment requirements of Part 17b.
- For the purposes of the decomposable material placement limits in iv. columns 4 and 5, decomposable materials are as defined in Part 22i. The Permit Holder shall demonstrate compliance with the cumulative decomposable placement limit in column 4 using the record keeping and reporting procedures in Part 22. The annual decomposable material placement limit in column 5 applies to each calendar year. The Permit Holder shall demonstrate compliance with these limits using the record keeping and reporting procedures in Part 22. Prior to exceeding a cumulative or annual decomposable material placement limit, the Permit Holder shall either surrender the amount of ERCs required for the next subsequent set of limits or submit a permit application to request a change of conditions. Each permit application submittal shall include a reassessment of the fugitive POC emissions conducted in accordance with Parts 17b(iiiv).
- v. The landfill gas NMOC concentration limit applies on a rolling three-year average basis. The Permit Holder shall demonstrate compliance with this limit using the monitoring and record keeping requirements in Part 14b. If testing indicates that the three-year average NMOC concentration in landfill gas collected S-2 has or will exceed the limit in column 6, the Permit Holder shall submit a permit application to request an increase of this NMOC concentration limit, within 45 days of recording the exceedance. The permit application submittal shall include a reassessment of the fugitive POC emissions conducted in accordance with Parts 17b(iiiv).

Condition # 19235

1/2/37	4.148	111.506	88.000	1,610,000	600

^{*} These limits and all subsequent limits are effective upon commencement of waste disposal in Fill Area 2.

b. The Permit Holder shall conduct a fugitive POC emissions reassessment for the S-2 Altamont Landfill in accordance with the schedule and procedures identified below.

96

i. A reassessment of the annual fugitive POC emission rate from the S-2 Altamont Landfill (Fill Areas 1 and 2 combined) shall be submitted to the District each year by no later than July 1st. The first reassessment is due the first July 1st after waste placement in Fill Area 2 commences. The reassessment shall be addressed to the attention of the District permit engineer assigned to this site, Engineering Division, BAAQMD, 375 Beale Street, Suite 600, San Francisco, CA 94105.

Condition # 19235

FOR: S-2 ALTAMONT LANDFILL - WASTE DECOMPOSITION PROCESS, EQUIPPED WITH LANDFILL GAS COLLECTION SYSTEM, AND ABATED BY A-15 LANDFILL GAS FLARE AND A-16 LANDFILL GAS FLARE;

S-43 ALTAMONT LANDFILL - WASTE AND COVER MATERIAL DUMPING; AND S-44 ALTAMONT LANDFILL - EXCAVATING, BULLDOZING, AND COMPACTING ACTIVITIES:

- ii. The fugitive POC emissions reassessment shall use the EPA LANDGEM program to determine the projected amount of landfill gas (scfm) and NMOC (tons/year) that will be generated by S-2 (Fill Areas 1 and 2 combined) for each year from 1980 through at least 2080. The Permit Holder shall use the following LANDGEM User Input Data: methane generation rate $(k) = 0.02 \text{ year}^{-1}$, potential methane generation capacity (L_0) = 100 m³/Mg, methane content = 50%. The Permit Holder shall use the best available data for the amount of decomposable materials placed in the landfill from 1980 through 2008. For calendar year 2009 and later, the Permit Holder shall use the annual decomposable material placement data recorded pursuant to Part 22. For the user-specified NMOC concentration in LANDGEM, the Permit Holder shall use the most recent three-year average NMOC concentration data (ppmv of NMOC expressed as hexane and corrected to 50% methane) recorded pursuant to Part
- iii. Each reassessment report shall include the fugitive POC emission rate determined for the current calendar year and for each subsequent year through the projected peak landfill gas generation year. Fugitive POC emissions shall be determined using the following equation:

POC_{fugitive} = NMOC_{generated} * 0.25 * 0.98

where: POC_{fugitive} is the projected amount of fugitive POC emissions (tons/year) for a particular calendar year

NMOC_{generated} is the projected amount of NMOC generated (tons/year) as determined by LANDGEM using the User-Input Data discussed above.

0.25 is the assumed fugitive emission fraction (75% captured and 25% fugitive) for the total NMOC generated

0.98 is the assumed POC fraction (by weight) of the total NMOC emission rate

VI. Permit Conditions

Condition # 19235

FOR: S-2 ALTAMONT LANDFILL - WASTE DECOMPOSITION PROCESS, EQUIPPED WITH LANDFILL GAS COLLECTION SYSTEM, AND ABATED BY A-15 LANDFILL GAS FLARE AND A-16 LANDFILL GAS FLARE;

S-43 ALTAMONT LANDFILL - WASTE AND COVER MATERIAL DUMPING; AND S-44 ALTAMONT LANDFILL - EXCAVATING, BULLDOZING, AND COMPACTING ACTIVITIES:

- iv. The current and projected annual fugitive POC emission rates determined per Part 17b(iii) shall be compared to the fugitive POC emission limits in the table in Part 17a. If the projected peak fugitive POC emission rate for the landfill is less than the maximum POC emissions limit in the table, the Permit Holder may, at his or her discretion, request that the District modify the Part 17a table limits and ERC submittal requirements based on the updated fugitive POC emissions calculations. This condition change request shall be submitted in the form of a District permit application, and the District will handle the request as an administrative permit condition change. If the peak fugitive POC emissions for S-2 are projected to exceed the maximum fugitive POC emission limit of 111.506 tons/year, the Permit Holder must submit a permit application to request an increase of this limit by no later than October 1st of the year in which the fugitive POC emissions reassessment was due. In this latter case, the permit application cannot be handled administratively, but the District will review the circumstances leading to the need to increase the maximum fugitive POC emissions for the landfill to determine if the change constitutes an alteration or a modification of S-2.
- 18. The Permit Holder shall comply with the following waste acceptance and disposal limits and shall obtain the appropriate New Source Review permit, if one of the following limits is exceeded:
 - a. Total waste accepted and placed at the landfill shall not exceed 11,150 tons in any day (except during temporary emergency situations approved by the Local Enforcement Agency). (Basis: Regulation 2-1-301)
 - b. The amount of non-hazardous sludge accepted and placed at the landfill shall not exceed 5,000 tons in any day. (Basis: Regulation 2-1-301)
 - c. The maximum design capacity of the landfill (total volume of solid waste placed in the landfill where solid waste has the same meaning as the definition in 40 CFR Part 60.751) shall not exceed 124,400,000 cubic yards. (Basis: Regulation 2-1-301)

VI. Permit Conditions

Condition # 19235

FOR: S-2 ALTAMONT LANDFILL - WASTE DECOMPOSITION PROCESS, EQUIPPED WITH LANDFILL GAS COLLECTION SYSTEM, AND ABATED BY A-15 LANDFILL GAS FLARE AND A-16 LANDFILL GAS FLARE;

- d. The total cumulative amount of all decomposable materials placed in Fill Area 1 of the landfill shall not exceed 51,020,000 tons. Exceedance of the cumulative tonnage limit is not a violation of the permit and does not trigger the requirement to obtain a New Source review permit, if the operator can, within 30 days of the date of discovery of the exceedance, provide documentation to the District demonstrating, in accordance with BAAQMD Regulation 2-1-234.3, that the limit should be higher. (Basis: Regulation 2-1-234.3)
- 19. This part applies to any activities associated with or related to the S-2 Altamont Landfill that generate particulate matter emissions including, but not limited to: waste and cover material delivery, placement, and compaction; on-site excavation of cover soil; and vehicle and mobile equipment travel on paved and unpaved roads within the property boundaries of Site # A2066.
 - a. For current landfill operations associated with or supporting waste disposal in Fill Area 1, water and/or dust suppressants shall be applied to all unpaved roadways and active soil removal and fill areas associated with this landfill as necessary to prevent visible particulate emissions that persist for more than 3 minutes in any hour. Paved roadways at the facility shall be kept sufficiently clear of dirt and debris as necessary to prevent persistent visible particulate emissions from vehicle traffic or wind. This subpart shall remain in effect until waste disposal in Fill Area 1 ceases. (Basis: Regulations 2-1-403, 6-1-301, and 6-1-305)
 - b. Effective upon commencement of waste disposal in Fill Area 2, the Permit Holder shall comply with the following particulate emission limits:
 - i. Total particulate emissions from the S-2 Altamont Landfill and the associated waste and cover material excavation, delivery, placement, and compaction operations shall not exceed 387.5 tons of PM10 during any calendar year. (Basis: Regulation 2-1-301)
 - ii. Each particulate emitting operation associated with S-2 shall be abated to the extent necessary to ensure compliance with the Ringelmann No. 1 limitation in Regulation 6-1-301. (Basis: Regulation 6-1-301)

VI. Permit Conditions

Condition # 19235

FOR: S-2 ALTAMONT LANDFILL - WASTE DECOMPOSITION PROCESS, EQUIPPED WITH LANDFILL GAS COLLECTION SYSTEM, AND ABATED BY A-15 LANDFILL GAS FLARE AND A-16 LANDFILL GAS FLARE;

S-43 ALTAMONT LANDFILL - WASTE AND COVER MATERIAL DUMPING; AND S-44 ALTAMONT LANDFILL - EXCAVATING, BULLDOZING, AND COMPACTING ACTIVITIES:

- c. Effective upon commencement of waste disposal in Fill Area 2, the main haul route for Fill Area 2, from the entrance gate off of Altamont Pass Road to the edge of the Fill Area 2 disposal area shall be paved with asphaltic concrete or other similar material. For these paved road segments, the Permit Holder shall employ all paved road dust control measures necessary to maintain compliance with the PM10 emission limits in subpart b. Paved road dust control measures may include: use of truck wash stations, sweeping, vacuuming, and water flushing to maintain an average paved road surface silt loading of 2.0 g/m² or less. If the average paved road surface silt loading is determined to be greater than 2.0 g/m², the Permit Holder shall limit the types and numbers of vehicles traveling on this paved road to ensure that the subpart b PM10 emission limits are not exceeded. (Basis: Regulation 2-1-403)
- d. Effective upon commencement of waste disposal in Fill Area 2, any temporary roads used for delivering soil from on-site cover soil excavation areas to Fill Area 2 and any temporary roads within Fill Areas 2 used for waste or cover material delivery shall be paved with gravel or other aggregate based materials. For these gravel road segments, the Permit Holder shall employ all gravel road dust control measures necessary to maintain compliance with the PM10 emission limits in subpart b. Gravel road dust control measures may include: application of dust suppressants at least once per month and use of frequent water spraying during dry periods. If the average gravel road surface material silt content is greater than 6.4%, the Permit Holder shall limit the types and numbers of vehicles traveling on these gravel roads to ensure that the subpart b PM10 emission limits are not exceeded. (Basis: Regulation 2-1-403)
- e. Effective upon commencement of waste disposal in Fill Area 2, the Permit Holder shall apply dust suppressants and water sprays to unpaved roads at a sufficient rate and frequency to ensure compliance with the subpart b PM10 emission limits. (Basis: Regulation 2-1-403)
- f. Effective upon commencement of waste disposal in Fill Area 2, the Permit Holder shall use water sprays and dust suppressants at the active face and at soil stockpiles at the rate and frequency necessary to ensure compliance with the subpart b PM10 emission limits and to prevent wind erosion from these areas. (Basis: Regulation 2-1-403)

VI. Permit Conditions

Condition # 19235

FOR: S-2 ALTAMONT LANDFILL - WASTE DECOMPOSITION PROCESS, EQUIPPED WITH LANDFILL GAS COLLECTION SYSTEM, AND ABATED BY A-15 LANDFILL GAS FLARE AND A-16 LANDFILL GAS FLARE;

S-43 ALTAMONT LANDFILL - WASTE AND COVER MATERIAL DUMPING; AND S-44 ALTAMONT LANDFILL - EXCAVATING, BULLDOZING, AND COMPACTING ACTIVITIES:

- g. Inactive landfill surfaces shall be re-vegetated as soon as possible. If necessary, dust suppressants or water sprays shall be used on any inactive landfill surfaces without vegetation at the rate and frequency necessary to prevent wind erosion. (Basis: Regulation 2-1-403)
- h. If the dust control measures in Part 19(c-g) are not sufficient to maintain compliance with the PM10 emission limits in Part 19(b), the Permit Holder shall employ any other measures deemed necessary by the APCO. Such additional control measures may include: increasing frequency of road sweeping, vacuuming, water flushing, dust suppressant applications, or water spray applications; using additional truck wash stations; and paving additional road segments, parking areas, or equipment staging areas with asphaltic concrete, gravel, or other appropriate materials. (Basis: Regulation 2-1-403)
- i. In order to demonstrate compliance with the PM10 emission limit in Part 19(b)(i), the Permit Holder shall calculate and record the PM10 emission rate for the S-2 Altamont Landfill on an annual basis using APCO approved emission calculation methods. The Permit Holder shall obtain APCO approval for these calculation methods prior to commencing waste disposal at Fill Area 2. The PM10 calculation procedures shall be based on EPA's most recent AP-42 procedures and site-specific data collected pursuant to subparts j and k below. (Basis: Regulation 2-1-403)
- j. Within six months of commencing waste disposal at Fill Area 2, and at least once every five years thereafter, the Permit Holder shall determine, using APCO approved procedures, the average paved road surface silt loading (g/m²) for the main haul route to Fill Area 2, the average surface material silt content (%) for Fill Area 2 gravel road segments, the average surface material silt content for Fill Area 2 unpaved road segments, and the actual length of each road segment. (Basis: Regulation 2-1-403)
- k. Upon commencing waste disposal in Fill Area 2, the Permit Holder shall maintain the following records in a District approved log:
 - i. Maintain a description of the vehicle fleet traveling on each road segment within this site (types of vehicles, empty weights, loaded weights, and types of materials carried by the vehicles). For each calendar year, estimate the average vehicle fleet weight and the annual vehicle fleet trips for each road segment.

VI. Permit Conditions

Condition # 19235

FOR: S-2 ALTAMONT LANDFILL - WASTE DECOMPOSITION PROCESS, EQUIPPED WITH LANDFILL GAS COLLECTION SYSTEM, AND ABATED BY A-15 LANDFILL GAS FLARE AND A-16 LANDFILL GAS FLARE;

S-43 ALTAMONT LANDFILL - WASTE AND COVER MATERIAL DUMPING; AND S-44 ALTAMONT LANDFILL - EXCAVATING, BULLDOZING, AND COMPACTING ACTIVITIES:

- For each calendar year, estimate the amount of each type of cover material used at Fill Area 2, the total amount of all cover materials used at Fill Area 2, and the amount of soil excavated for cover material from on-site locations.
- iii. Maintain a description of the types of off-road mobile equipment used at the active face (bulldozers, compactors, etc.) and the numbers of each type of equipment that are employed during an operating day. For each calendar year, estimate the annual operating hours at the active face for each type of equipment.
- iv. Maintain a dust control plan that identifies the anticipated locations for dust suppressant and water spray applications, the types of dust suppressants that may be used, the application rates for each type of dust suppressant and for the water sprays, the anticipated application frequency for each type of dust suppressant and for the water sprays, a description of all paved road cleaning procedures (sweeping, vacuuming, water flushing), the anticipated frequency for all paved road cleaning procedures, the locations of truck wash stations, and truck wash station operating procedures.
- v. For each calendar year, maintain sufficient records to demonstrate, to the APCO's satisfaction, that the dust control plan was properly implemented including any supporting documentation, such as rain fall data for each day of the year. For unpaved roads, these records should include the dates that dust suppressants were applied, the dates that water sprays were applied, and the frequency of water spray reapplications on these dates. On operating days when water sprays are not employed on unpaved road, the records shall include the reason why water sprays were not employed. For paved roads, these records should include the dates that the paved roads were cleaned and a description of the cleaning procedures used. For truck wash stations, maintain records of operating days. For areas other than roads, the records should include dates of dust suppressant application and frequency of water spray applications.

VI. Permit Conditions

Condition # 19235

FOR: S-2 ALTAMONT LANDFILL - WASTE DECOMPOSITION PROCESS, EQUIPPED WITH LANDFILL GAS COLLECTION SYSTEM, AND ABATED BY A-15 LANDFILL GAS FLARE AND A-16 LANDFILL GAS FLARE;

S-43 ALTAMONT LANDFILL - WASTE AND COVER MATERIAL DUMPING; AND S-44 ALTAMONT LANDFILL - EXCAVATING, BULLDOZING, AND COMPACTING ACTIVITIES:

vi. All records shall be maintained on site or shall be made readily available to District staff upon request for at least 5 years from the date of entry.

(Basis: Regulation 2-1-403)

- 20. This Part applies to the acceptance, handling, storage, and on-site reuse of VOC-laden soil. VOC-laden soil is any soil that contains volatile organic compounds, as defined in Regulation 8-40-213, other than contaminated soil. As defined in Regulation 8-40-205, contaminated soil contains more than 50 ppmw of VOC or has a surface concentration greater than 50 ppmv of VOC as C1, and contaminated soil is subject to Part 21 below instead of this part. Materials containing only non-volatile hydrocarbons and materials meeting the requirements of Regulation 8-40-113 are not subject to this part. For each lot of VOC-laden soil accepted at this site, the Permit Holder shall comply with the limits and monitoring procedures identified in either subpart a or subpart b below to demonstrate compliance with the total carbon limits in Regulation 8-2-301. (Basis: Regulation 8-2-301)
 - a. Unless the Permit Holder demonstrates compliance with Regulation 8-2-301 in accordance with subpart b below, the Permit Holder shall limit the quantity of VOC laden soil handled per day such that no more than 15 pounds of total carbon could be emitted to the atmosphere per day. In order to demonstrate compliance with this subpart, the Permit Holder shall maintain the following records in a District approved log for all VOC-laden soil accepted at the landfill.
 - i. Record on a daily basis the amount of VOC laden soil accepted for each truckload or each soil lot, as appropriate. This amount (in units of pounds per day) is Q in the equation in subpart a(iii) below.
 - ii. Record on a daily basis the VOC content for each truckload or each soil lot, as appropriate. This VOC Content (C in the equation below) should be expressed as parts per million by weight as total carbon (or C1).

103

VI. Permit Conditions

Condition # 19235

FOR: S-2 ALTAMONT LANDFILL - WASTE DECOMPOSITION PROCESS, EQUIPPED WITH LANDFILL GAS COLLECTION SYSTEM, AND ABATED BY A-15 LANDFILL GAS FLARE AND A-16 LANDFILL GAS FLARE;

S-43 ALTAMONT LANDFILL - WASTE AND COVER MATERIAL DUMPING; AND S-44 ALTAMONT LANDFILL - EXCAVATING, BULLDOZING, AND COMPACTING ACTIVITIES:

- iii. Calculate and record on a daily basis the VOC Emission Rate (E) using the following equation: E = Q * C / 1E6This equation may be applied to each truckload or to each soil lot received per day depending on the amount of soil that is represented by the VOC Content data. If the equation is applied to multiple loads per day, the VOC Emission Rate shall be totaled for all loads received each day.
- iv. Summarize all daily emission rates on a monthly and calendar year basis.
- v. All records shall be maintained on site or shall be made readily available to District staff upon request for at least 5 years from the date of entry.
- b. Unless the Permit Holder demonstrates compliance with Regulation 8-2-301 in accordance with subpart a above, the Permit Holder shall screen each lot of VOC laden soil accepted per day for VOC surface emissions to show that each lot of VOC laden soil is not contaminated soil.
 - i. The Permit Holder shall use the testing procedures outlined in Regulation 8-40-604.
 - ii. The screening test shall be representative of the entire lot of VOC-laden soil. The soil surface shall be disturbed prior to screening to ensure that the screening is representative of the entire load.
 - iii. The Permit Holder shall maintain records of all testing conducted to satisfy this subpart and shall record the amount of VOC-laden soil accepted and the highest surface concentration measured pursuant to this subpart. These records shall be maintained for each truckload or each soil lot accepted, as appropriate, provided that the records are made or summarized on at least a daily basis.
 - iv. Summarize the daily soil acceptance rates and the weighted average of the surface concentration records on a monthly basis and for each calendar year.
 - v. All records shall be maintained on site or shall be made readily available to District staff upon request for at least 5 years from the date of entry.

VI. Permit Conditions

Condition # 19235

FOR: S-2 ALTAMONT LANDFILL - WASTE DECOMPOSITION PROCESS, EQUIPPED WITH LANDFILL GAS COLLECTION SYSTEM, AND ABATED BY A-15 LANDFILL GAS FLARE AND A-16 LANDFILL GAS FLARE;

S-43 ALTAMONT LANDFILL - WASTE AND COVER MATERIAL DUMPING; AND S-44 ALTAMONT LANDFILL - EXCAVATING, BULLDOZING, AND COMPACTING ACTIVITIES:

- 21. This part applies to any on-site activities involving contaminated soil as defined in Regulation 8-40-205. Unless stated otherwise, all terms, standards, or procedures described in this part have the same meaning as the terms, standards, and procedures described in Regulation 8, Rule 40. (Basis: Regulation 2-1-301, 2-1-403, 8-40-301, 8-40-304 and 8-40-305)
 - a. The procedures listed below in subparts b-l do not apply if the following criteria are satisfied. However, the record keeping requirements in subpart m below are applicable.
 - i. The Permit Holder has appropriate documentation demonstrating that either the organic content of the soil or the organic concentration above the soil is below the "contaminated" level (as defined in Regulations 8-40-205, 207, and 211). The handling of soil containing in concentrations below the "contaminated" level is subject to Part 20 above.
 - ii. The Permit Holder has no documentation to prove that soil is not contaminated, but source of the soil is known and there is no reason to suspect that the soil might contain organic compounds.
 - b. The Permit Holder shall provide notification to the Compliance and Enforcement Division of the Permit Holder's intention to accept contaminated soil at the facility at least 24 hours in advance of receiving the contaminated soil. The Permit Holder shall provide an estimate of the amount of contaminated soil to be received, the degree of contamination (range and average VOC Content), and the type or source of contamination.
 - c. Any soil received at the facility that is known or suspected to contain volatile organic compounds (VOCs) shall be handled as if the soil were contaminated, unless the Permit Holder receives test results proving that the soil is not contaminated. To prove that the soil is not contaminated, the Permit Holder shall collect soil samples in accordance with Regulation 8-40-601 within 24 hours of receipt of the soil by the facility. The organic content of the collected soil samples shall be determined in accordance with Regulation 8-40-602.

VI. Permit Conditions

Condition # 19235

FOR: S-2 ALTAMONT LANDFILL - WASTE DECOMPOSITION PROCESS, EQUIPPED WITH LANDFILL GAS COLLECTION SYSTEM, AND ABATED BY A-15 LANDFILL GAS FLARE AND A-16 LANDFILL GAS FLARE;

S-43 ALTAMONT LANDFILL - WASTE AND COVER MATERIAL DUMPING; AND S-44 ALTAMONT LANDFILL - EXCAVATING, BULLDOZING, AND COMPACTING ACTIVITIES:

- i. If these test results indicate that the soil is still contaminated or if the soil was not sampled within 24 hours of receipt by the facility, the Permit Holder must continue to handle the soil in accordance with the procedures subparts d-l below, until the soil has been placed in a final disposal location and adequately covered. Storing soil in a temporary stockpile or pit is not considered treatment. Comingling, blending, or mixing of soil lots is not considered treatment.
- ii. If these test results indicate that the soil as received at the facility has an organic content of 50 ppmw or less, then the soil may be considered to be not contaminated and need not be handled in accordance with the procedures listed in subparts d-l below, but shall be handled in accordance with Part 20 above.
- d. Any contaminated soil received at the facility shall be clearly identified as contaminated soil, shall be handled in accordance with subparts e-l below, and shall be segregated from non-contaminated soil. Contaminated soil lots may not be co-mingled, blended, or otherwise mixed with non-contaminated soil lots prior to treatment, reuse, or disposal. Mixing soil lots in an attempt to reduce the overall concentration of the contaminated soil or to circumvent any requirements or limits is strictly prohibited.
- e. On-site handling of contaminated soil shall be limited to no more than 2 on-site transfers per soil lot. For instance, unloading soil from off-site transport vehicles into a temporary storage pile is considered one transfer. Moving soil from a temporary storage to a staging area is considered one transfer. Moving soil from a temporary storage pile to a final disposal site is one transfer. Moving soil from a staging area to a final disposal site is one transfer. Therefore, unloading soil from off-site transport into a temporary storage pile and then moving the soil from that temporary storage pile to the final disposal site is allowed. Unloading soil from off-site transport into a staging area and then moving the soil from that staging area to the final disposal site is allowed. However, unloading soil from off-site transport to a temporary storage pile, moving this soil to a staging area, and then moving the soil again to a final disposal site is 3 on-site transfers and is not allowed.

106

VI. Permit Conditions

Condition # 19235

FOR: S-2 ALTAMONT LANDFILL - WASTE DECOMPOSITION PROCESS, EQUIPPED WITH LANDFILL GAS COLLECTION SYSTEM, AND ABATED BY A-15 LANDFILL GAS FLARE AND A-16 LANDFILL GAS FLARE;

S-43 ALTAMONT LANDFILL - WASTE AND COVER MATERIAL DUMPING; AND S-44 ALTAMONT LANDFILL - EXCAVATING, BULLDOZING, AND COMPACTING ACTIVITIES:

- f. Contaminated soil shall either be deposited in a final disposal site or transported off-site for treatment:
 - a. within 90 days, if the soil contains less than 500 ppmw of VOC, or
 - b. within 45 days, if the soil contains 500 ppmw of VOC or more.
- g. The total amount of contaminated soil disposed of at this site shall not exceed 6000 tons per day. (Basis: Regulation 2-1-301)
- h. All active storage piles shall meet the requirements of Regulation 8-40-304 by using water sprays, vapor suppressants or approved coverings to minimize emissions. The exposed surface area of any active storage pile (including the active face at a landfill) shall be limited to 6000 ft2. The types of storage piles that may become subject to these provisions include (but are not limited to) truck unloading areas, staging areas, temporary stockpiles, soil on conveyors, bulldozers or trucks, the active face of a landfill, or other permanent storage pile at the final disposal location.
- i. All inactive storage piles shall meet the requirements of Regulation 8-40-305 including the requirement to cover contaminated soil during periods of inactivity longer than one hour. The types of storage piles that may become subject to these provisions include (but are not limited to) soil on trucks or other on-site equipment, staging areas, temporary stockpiles, and the permanent storage pile at the final disposal location. District approved coverings for inactive storage piles include continuous heavy-duty plastic sheeting (in good condition, joined at the seams, and securely anchored) or encapsulating vapor suppressants (with re-treatment as necessary to prevent emissions).
- j. The Permit Holder must:
 - i. Keep contaminated soil covered with continuous heavy-duty plastic sheeting (in good condition, joined at the seams, and securely anchored) whenever soil is to be stored in temporary stockpiles or during on-site transport in trucks. Soil in trucks shall not be left uncovered for more than 1 hour.
 - ii. Establish a tipping area for contaminated soils near the active face that is isolated from the tipping area for other wastes.
 - iii. Spray contaminated soil with water or vapor suppressant immediately after dumping the soil from a truck at the tipping area.

VI. Permit Conditions

Condition # 19235

FOR: S-2 ALTAMONT LANDFILL - WASTE DECOMPOSITION PROCESS, EQUIPPED WITH LANDFILL GAS COLLECTION SYSTEM, AND ABATED BY A-15 LANDFILL GAS FLARE AND A-16 LANDFILL GAS FLARE;

S-43 ALTAMONT LANDFILL - WASTE AND COVER MATERIAL DUMPING; AND S-44 ALTAMONT LANDFILL - EXCAVATING, BULLDOZING, AND COMPACTING ACTIVITIES:

- iv. Ensure that all contaminated soil is transferred from the tipping area to the active face immediately after spraying with water or vapor suppressant.
- v. Ensure that contaminated soil in the tipping area is not disturbed by subsequent trucks. Trucks shall not drive over contaminated soil in the tipping area or track contaminated soil out of the tipping area on their wheels.
- vi. Spray contaminated soil on the active face with water or vapor suppressant (to keep the soil visibly moist) until the soil can be covered with an approved covering.
- vii. Limit the area of exposed soil on the active face to no more than 6000 ft2.
- viii. Ensure that contaminated soil spread on the active face is completely covered on all sides with one of the following approved coverings: at least 6 inches of clean compacted soil, at least 12 inches of compacted garbage, or at least 12 inches of compacted green waste.
- ix. Ensure that covering of soil on the active face is completed within one hour of the time that the soil was first dumped from a truck at the tipping area.
- k. Contaminated soil shall not be used as daily, intermediate, or final cover material for landfill waste operations unless the requirements of Regulation 8, Rule 40, Sections 116 or 117 have been satisfied.
- 1. Contaminated soil is considered to be a decomposable solid waste pursuant to Regulation 8, Rule 34. All contaminated soil disposed of at a site shall be included in any calculations of the amount of decomposable waste in place for annual reporting requirements or for purposes of 8-34-111 or 8-34-304.
- m. The Permit Holder shall keep the following records for each lot of soil received, in order to demonstrate on-going compliance with the applicable provisions of Regulation 8, Rule 40 and this part.

VI. Permit Conditions

Condition # 19235

FOR: S-2 ALTAMONT LANDFILL - WASTE DECOMPOSITION PROCESS, EQUIPPED WITH LANDFILL GAS COLLECTION SYSTEM, AND ABATED BY A-15 LANDFILL GAS FLARE AND A-16 LANDFILL GAS FLARE;

S-43 ALTAMONT LANDFILL - WASTE AND COVER MATERIAL DUMPING; AND S-44 ALTAMONT LANDFILL - EXCAVATING, BULLDOZING, AND COMPACTING ACTIVITIES:

- i. For all soil received by the facility (including soil with no known contamination), record the arrival date at the facility, the soil lot number, the amount of soil in the lot, the organic content or organic concentration of the lot (if known), the type of contamination (if any), and keep copies of any test data or other information that documents whether the soil is contaminated (as defined in 8-40-205) or not contaminated, with what, and by how much.
- ii. If the soil is tested for organic content after receipt by the facility, a report with the sampling date, test results, and the date results were received.
- iii. For all on-site handling of contaminated soil, use a checklist or other approved method to demonstrate that appropriate procedures were followed during all on-site handling activities. One checklist shall be completed for each day and for each soil lot (if multiple lots are handled per day).
- iv. For soil aerated in accordance with 8-40-116 or 117 record the soil lot number, the amount of soil in the lot, the organic content, the final placement date, the final placement location, and describe how the soil was handled or used on-site.
- v. For final disposal at a landfill, record on a daily basis the soil lot number, the amount of soil placed in the landfill, the disposal date, and the disposal location.
- vi. Summarize the total amount of contaminated soil disposed of at this site on a monthly and calendar year basis to demonstrate compliance with subpart g.

All records shall be retained for at least 5 years from the date of entry and shall be made available for District inspection upon request.

VI. Permit Conditions

Condition # 19235

FOR: S-2 ALTAMONT LANDFILL - WASTE DECOMPOSITION PROCESS, EQUIPPED WITH LANDFILL GAS COLLECTION SYSTEM, AND ABATED BY A-15 LANDFILL GAS FLARE AND A-16 LANDFILL GAS FLARE;

S-43 ALTAMONT LANDFILL - WASTE AND COVER MATERIAL DUMPING; AND S-44 ALTAMONT LANDFILL - EXCAVATING, BULLDOZING, AND COMPACTING ACTIVITIES:

- 22. To demonstrate compliance with Parts 17-21 and Regulation 8-34-304, the Permit Holder shall maintain the following records in a District approved logbook. All records shall be maintained on site or shall be made readily available to District staff upon request for a period of at least 5 years from the date of entry. These record keeping requirements do not replace the record keeping requirements contained in any applicable rules or regulations. (Basis: Regulations 2-1-301, 2-6-501, 6-1-301, 6-1-305, 8-2-301, 8-40-301, 8-34-304, and 8-34-501)
 - a. Record the total amount of municipal solid waste received at the landfill on a daily basis. Summarize the daily waste acceptance records for each calendar month.
 - b. For each area or cell that is not controlled by a landfill gas collection system, maintain a record of the date that waste was initially placed in the area or cell. Record the cumulative amount of waste placed in each uncontrolled area or cell on a monthly basis.
 - c. If the Permit Holder plans to exclude an uncontrolled area or cell from the collection system requirement, the Permit Holder shall also record the types and amounts of all non-decomposable waste placed in the area and the percentage (if any) of decomposable waste placed in the area.
 - d. Record the initial operation date for each new landfill gas well and collector.
 - e. Maintain an accurate map of the landfill that indicates the locations of all refuse boundaries and the locations of all wells and collectors (using unique identifiers) that are required to be operating continuously pursuant to Part 1a. Any areas containing only non-decomposable waste shall be clearly identified. This map shall be updated at least once a year to indicate changes in refuse boundaries and to include any newly installed wells and collectors.
 - f. Record of the dates, locations, and frequency per day of all watering activities on unpaved roads or active soil or fill areas. Record the dates, locations, and type of any dust suppressant applications. Record the dates and description of all paved road-cleaning activities. All records shall be summarized on monthly basis.
 - g. Record the date on which waste placement in Fill Area 2 commences.
 - h. Record the date on which waste placement in Fill Area 1 ceases.

VI. Permit Conditions

Condition # 19235

FOR: S-2 ALTAMONT LANDFILL - WASTE DECOMPOSITION PROCESS, EQUIPPED WITH LANDFILL GAS COLLECTION SYSTEM, AND ABATED BY A-15 LANDFILL GAS FLARE AND A-16 LANDFILL GAS FLARE;

S-43 ALTAMONT LANDFILL - WASTE AND COVER MATERIAL DUMPING; AND S-44 ALTAMONT LANDFILL - EXCAVATING, BULLDOZING, AND COMPACTING ACTIVITIES:

- i. Effective upon commencement of waste disposal in Fill Area 2, the Permit Holder shall demonstrate compliance with the cumulative and annual average decomposable material placement limits in Part 17a by maintaining the following records in a District approved log. For the purposes of Part 17 and this subpart, decomposable materials shall include all wastes disposed of in either fill area of the landfill other than quantities of inert (non-decomposable) wastes recorded pursuant to subpart c, all daily cover materials that are decomposable, any decomposable materials that are used in the construction of the intermediate cover for an area unless the decomposable materials were placed on the uppermost surface and were being used for the purpose of erosion control or revegetation of the intermediate landfill surface.
 - i. Maintain quarterly estimates of the total amount of all decomposable materials used for either daily or intermediate cover at each fill area of the landfill and summarize these estimates for each calendar year.
 - ii. Using the waste acceptance records required by Part 22a-c and the decomposable cover material estimates required above, summarize the total amount (in tons) of decomposable materials placed in the landfill for each calendar year. If Fill Area 1 and Fill Area 2 are both accepting waste during a year, maintain separate calendar year totals for each fill area as well as the total calendar year decomposable material placement amount for the entire landfill. Clearly identify the type and amount of any inert or non-decomposable wastes that are being excluded from these annual totals.
 - iii. Determine and record the cumulative amount (in tons) of decomposable materials placed in the S-2 Altamont Landfill as of December 31st for each calendar year. Prior to commencement of waste disposal in Fill Area 2, the best available decomposable material placement data shall be used to determine the cumulative amount of decomposable materials placed in Fill Area 1 of S-2.

VI. Permit Conditions

Condition # 19235

FOR: S-2 ALTAMONT LANDFILL - WASTE DECOMPOSITION PROCESS, EQUIPPED WITH LANDFILL GAS COLLECTION SYSTEM, AND ABATED BY A-15 LANDFILL GAS FLARE AND A-16 LANDFILL GAS FLARE;

S-43 ALTAMONT LANDFILL - WASTE AND COVER MATERIAL DUMPING; AND S-44 ALTAMONT LANDFILL - EXCAVATING, BULLDOZING, AND COMPACTING ACTIVITIES:

- iv. The cumulative amount of decomposable materials recorded pursuant to Part 22i(iii) shall be reported to the District pursuant to the annual information update request for this facility under S-2, source code: G7145580.
- 23. The annual report required by BAAQMD Regulation 8-34-411 shall be submitted in two semi-annual increments. The reporting periods and report submittal due dates for the Regulation 8-34-411 report shall be synchronized with the reporting periods and report submittal due dates for the semi-annual MFR Permit monitoring reports that are required by Section I.F of the MFR Permit for this site. A single report may be submitted to satisfy the requirements of Section I.F, Regulation 8-34-411, and 40 CFR Part 63.1980(a), provided that all items required by each applicable reporting requirement are included in the single report. (Basis: Regulation 8-34-411 and 40 CFR Part 63.1980(a))

112

VI. Permit Conditions

Condition # 20774

FOR: S-19 TRANSFER TANK WITH SIPHON PUMP

- 1. The total throughput of all liquid material to S-19 shall not exceed 1,576,800 gallons during any consecutive 12-month period. (Basis: Cumulative Increase)
- 2. A flow totalizer shall be installed and operated at S-19 to measure and indicate, in gallons, the total flow of liquid throughput to/processed at S-19 in each month. (Basis: Cumulative Increase)
- 3. The amount of waste material collected from the siphon pump at S-19 shall not exceed 20,750 gallons during any consecutive 12-month period. (Basis: Cumulative Increase)
- 4. The amount of liquid material processed at S-19 and the amount of waste material collected from the siphon pump shall be recorded monthly in a District approved log. This log shall be retained for at least five years from date of entry. This log shall be kept on site and made readily available to the District staff upon request. (Basis: Cumulative Increase)

113

VI. Permit Conditions

Condition # 20801

FOR: S-193 DIESEL ENGINE (FOR FIRE PUMP AT GAS PLANT)

- 1. Diesel fuel usage at S-193 shall not exceed 62,196 gallons during any consecutive 12-month period. (Basis: Regulation 2-1-301)
- 2. In order to demonstrate compliance with Part 1 above, the Permit Holder shall maintain the following records in a District approved log:
 - a. Monthly records of the operating hours for this engine.
 - b. Monthly records of the amount of diesel fuel used at this engine.
 - c. All monthly records shall be summarized on a rolling 12-month basis.
 - d. Vendor certifications of the fuel oil sulfur content for any fuels burned in this engine or records demonstrating that only CARB diesel oil is burned in this engine.

All records shall be made available to District staff upon request and shall be kept on site for a minimum of five years from the date of entry.

(Basis: Regulations 2-1-301 and 9-1-304)

Condition # 20813

FOR: S-99 NON-RETAIL GASOLINE DISPENSING FACILITY G # 7123

- 1. This facility's annual gasoline throughput shall not exceed 30,000 gallons in any consecutive 12-month period. (Basis: Offsets)
- 2. In order to demonstrate compliance with Part 1, the Permit Holder shall maintain monthly records of the gasoline throughput at S-99/G7123 in a District approved log. This log shall be retained for at least five years from date of entry. This log shall be kept on site and made readily available to the District staff upon request. (Basis: Offsets and Regulations 2-6-501 and 2-6-503)

114

VI. Permit Conditions

Condition # 20828

FOR: SPECIFIED PAVED ROADS AT FACILITY # A2066 AND S-2 ALTAMONT LANDFILL

These conditions do not apply unless the Permit Holder has satisfied the requirements of Certificate of Deposit # 821 including the road paving requirements of Condition #20459. Upon completing the road paving requirements of Condition #20459, the Permit Holder shall comply with these conditions in addition to all other applicable requirements for this facility.

1. The Permit Holder shall implement the following best management practices to minimize the silt loading on the paved roads listed below.

Road A Perimeter Road, 9030 feet Road B Scale to Wye, 2420 feet Road C Composting Road, 3405 feet

- a. The Permit Holder shall clean all sections of road with a vacuum sweeper and/or by water flushing at least once per week. The Permit Holder may petition the APCO to reduce the frequency of road cleaning based upon silt loading test results, in accordance with the procedures identified in Regulations 2-1-402, 2-2-401, 2-6-403 and 2-6-406. The Permit Holder shall obtain written approval from the APCO for a decrease in road cleaning frequency prior to its implementation. The Permit Holder shall submit a road cleaning schedule to the District at least two weeks prior to the completion of road paving.
- b. The Permit Holder shall maintain the entrances to the paved roadways to minimize the amount of silt material being tracked onto the paved area by customer traffic. Maintenance shall include rocking or applying a dust suppressant, as necessary, to an apron area immediately adjacent to the paved road.
- c. The Permit Holder shall install and maintain concrete barriers, soil slopes, surface water control ditches, or other barriers to control traffic and reduce random departures of customer traffic from the paved roads onto the unpaved portions of the disposal area.
- d. The Permit Holder shall mark, control, and develop the entrances and exits to the unpaved disposal areas to minimize the distance traveled on unpaved ground as reasonably determined by operational factors.

115

(Basis: Regulation 2-2-201)

Condition # 20828

FOR: SPECIFIED PAVED ROADS AT FACILITY # A2066 AND S-2 ALTAMONT LANDFILL

- 2. The average silt loading for the paved roads listed in Part 1 shall not exceed 7.4 grains/m². The Permit Holder shall verify compliance with this limit by testing each of the paved roads at least once per quarter to determine the weighted average silt loading. The first test shall be conducted at least three months after the completion of the paving of each road. Each test shall be conducted no less than six days after the last cleaning conducted pursuant to Part 1a. The Permit Holder shall notify the District of each pending source test at least on week prior to the source test date. The Permit Holder shall perform such testing in accordance with the surface/bulk dust loading sampling and laboratory analysis procedures of AP-42, Appendix C.1, "Procedures for Sampling Surface/Bulk Dust Loading", dated 7/93, and Appendix C.2 "Procedures for Laboratory Analysis of Surface Bulk Dust Loading Samples", dated 7/93. (Basis: Regulation 2-2-201)
- 3. The total vehicle miles traveled (VMT) and average vehicle weight over any consecutive twelve-month period shall not exceed the following limits for each paved road.

	Road	Vehicle Miles Traveled	Average Vehicle Weight
		(VMT/Year)	(Tons)
A	Perimeter	122,315	15.95
В	Scale to Wye	285,419	25.06
C	Composting	82,545	28.5

The silt loading, VMT, and average vehicle weight limits specified in Parts 2 and 3 may only be exceeded if the Permit Holder can demonstrate through District-approved records and District-approved emission calculations (per EPA methods outlined in AP-42, Section 13.2.1, "Paved Roads", dated 10/97) that the total combined PM₁₀ emissions for the three paved roads do not exceed 207.962 tons totaled over the previous consecutive twelve-month period.

116

(Basis: Regulation 2-2-201)

VI. Permit Conditions

Condition # 20828

FOR: SPECIFIED PAVED ROADS AT FACILITY # A2066 AND S-2 ALTAMONT LANDFILL

4. The Permit Holder shall maintain monthly records of all vehicle miles traveled and the average weight of all vehicles traveling on the paved roads specified in Part 1 to verify compliance with Part 3. The average vehicle weight records may be based upon typical vehicle weights for various vehicle types and payloads as determined by the Permit Holder. The records of vehicle miles traveled may be based upon typical travel routes for each vehicle type and payload as determined by the Permit Holder. In the case of customer vehicle trips accepted at the facility, the vehicle miles traveled and average vehicle weight may be in the form of electronic or hard copies of scale records. The Permit Holder shall retain all records on site for minimum of five years from the date of entry and make those records available to District representatives upon request.

117

(Basis: Regulations 2-2-419.1 and 2-6-501)

Condition # 20922

For: S-140 SBR 1 AND S-141 SBR 2 (AERATED BIOLOGICAL REACTORS)

- 1. In order to avoid triggering BACT requirements for S-140 and S-141, the Permit Holder shall ensure that S-140 and S-141 are each complying with one of the following requirements (either subpart a or subpart b below). (Basis: Regulation 2-1-403: Keep Emissions Below BACT Trigger)
 - a. The wastewater throughput to each reactor (S-140 and S-141) shall not exceed 52,400 gallons during any one day (as determined by Part 5f) and the total volatile organic compound (VOC) concentration in the wastewater shall not exceed 52 ppm by weight (as determined by Part 5b); or
 - b. The emissions from each reactor (S-140 and S-141) shall not exceed 10.0 pounds of precursor organic compounds (POC) during any day (as determined by Part 5h).
- 2. The Permit Holder shall ensure that S-140 and S-141 are complying with one of the following requirements (either subpart a or subpart b below). (Basis: Offsets)
 - a. The total combined wastewater throughput to S-140 and S-141 shall not exceed 6,460,000 gallons during any consecutive 12-month period (as determined by Part 5g) and the total VOC concentration in the wastewater shall not exceed 52 ppm by weight (as determined by Part 5b); or
 - b. The emissions from S-140 and S-141 combined shall not exceed 1230 pounds of POC during any consecutive 12-month period (as determined by Part 5i).
- *3. The Permit Holder shall submit a permit application for a Change of Permit Conditions, if the annual average concentration of a compound in untreated wastewater (as determined by Parts 4 and 5c) is greater than the concentration limit listed below. The Permit Application shall be submitted to the Engineering Division, within 45 days of determining that an annual average concentration is above a limit listed below. (Basis: Regulation 2-5-302)

Compound	Concentration Limit (ppbw)
Benzene	80
Chloroform	470
1,4 Dichlorobenzene	1020
Methylene Chloride	2530
Naphthalene	3590
Perchloroethylene	430
Trichloroethylene	1290
Vinyl Chloride	30

VI. Permit Conditions

Condition # 20922

For: S-140 SBR 1 AND S-141 SBR 2 (AERATED BIOLOGICAL REACTORS)

- 4. In order to demonstrate compliance with Parts 1-3, the Permit Holder shall analyze the primary sources of untreated wastewater (wastewater that is delivered to the S-130 Equalization Tank from the lift station and wastewater from the leachate storage tanks) on a quarterly basis. Wastewater samples shall be collected and analyzed in accordance with EPA Method 8260B and shall be tested for the following compounds. (Basis: Offsets and Regulation 2-5-302)
 - a. Each of the compounds listed in Part 3 (benzene, chloroform, 1,4-dichlorobenzene, methylene chloride, naphthalene, perchloroethylene, trichloroethylene, and vinyl chloride),
 - b. Any compounds that have been detected in wastewater during the last three years including: bromodichloromethane, 2-butanone (methyl ethyl ketone), butyl benzene (n- and sec-), 1,2 dichlorobenzene, dichlorodifluoromethane, ethyl benzene, 4-isopropyl toluene, 4-methyl 2-pentanone (methyl isobutyl ketone), methyl-tert-butyl ether (MTBE), propyl benzene (iso- and n-), styrene, toluene, 1,2,4-trichlorobenzene, 1,1,1 trichloroethane, trimethyl benzenes, and xylenes (o-, m-, p-),
 - c. Any other organic compounds required to be measured pursuant to EPA Method 8260B, and
 - d. Organic compound has the same meaning as the definition in Regulation 8-1-201. Total organic compounds shall include all volatile and semi-volatile organic compounds that have been detected in the wastewater. Any compounds that have not been detected may be assumed to have zero contribution toward the total organic compound concentration.
- 5. In order to demonstrate compliance with Parts 1-3, the Permit Holder shall maintain the following records in a District approved logbook. All records shall be maintained on site or shall be made readily available to District staff upon request for a period of at least 5 years from the date of entry. These record keeping requirements do not replace the record keeping requirements contained in any applicable rules or regulations. (Basis: Offsets and Regulation 2-5-302)

119

a. Maintain records that identify the source of each wastewater sample collected, sample collection dates, sample collection procedures, analytical procedures, analysis dates, and analytical results for each wastewater analysis required by Part 4,

VI. Permit Conditions

Condition # 20922

For: S-140 SBR 1 AND S-141 SBR 2 (AERATED BIOLOGICAL REACTORS)

- b. On a quarterly basis, calculate and record the total volatile organic compound (VOC) concentration and the concentration for each compound listed in Part 3, in accordance with Part 4d. If more than one wastewater sample has been collected and analyzed for a quarter, calculate and record the weighted average concentrations (for each compound in Part 3 and total organic compounds) based on the relative wastewater throughput contribution from each source of wastewater during the past quarter. Compare the VOC concentration determined for this subpart to the limit in Parts 1a and 2a.
- c. On a quarterly basis, calculate and record the annual average concentration (average of four consecutive quarters) for each compound listed in Part 3. Compare the annual average concentrations determined for this subpart to the limits in Part 3.
- d. Record the operating dates, times, and rates for S-140 and S-141 on a daily basis.
- e. Record the total wastewater throughput to S-140 and S-141 on a monthly basis and identify the source(s) of the untreated wastewater that was delivered to the S-130 Equalization Tank during the last month. If the wastewater delivered to S-130 comes from more than one source, estimate the relative throughput contributions for each source of the wastewater.
- f. On a monthly basis, calculate and record the maximum daily wastewater throughput to each reactor (S-140 and S-141) using the operating data and throughput rates recorded per Parts 5d-e. Compare the maximum daily wastewater throughput rate determined by this subpart to the limit in Part 1a
- g. On a monthly basis, calculate and record the total wastewater throughput to S-140 and S-141 combined for each consecutive 12-month period. Compare the total wastewater throughput rate determined by this subpart to the limit in Part 2a.

120

Condition # 20922

For: S-140 SBR 1 AND S-141 SBR 2 (AERATED BIOLOGICAL REACTORS)

h. If the maximum daily wastewater throughput rate to a reactor (determined by Part 5f) exceeds the throughput limit in Part 1a or a quarterly VOC concentration (determined by Part 5b) exceeds the VOC concentration limit in Parts 1a and 2a, the Permit Holder shall demonstrate compliance with the POC emission limit in Part 1b for each month or quarter, as applicable. Daily POC emissions (E) shall be calculated using the following equation:

E = 3.67E-6 * Q * C

- where E is pounds of POC emissions per day, Q is maximum daily wastewater influent rate for a month (as determined by Part 5f), and C is the concentration of VOC in the influent wastewater (ppm by weight) for a quarter (as determined by Part 5b).
- i. If the rolling annual wastewater throughput rate to the two reactors (as determined by Part 5g) exceeds the throughput limit in Part 2a or a quarterly VOC concentration (as determined by Part 5b) exceeds the VOC concentration limit in Parts 1a and 2a, the Permit Holder shall demonstrate compliance with the POC emission limit in Part 2b for each month or quarter, as applicable. Rolling annual POC emissions (E) shall be calculated using the following equation:

E = 3.67E-6 * Q * C

where E is pounds of POC emissions per 12-month period, Q is total wastewater influent rate for a 12-month period (as determined by Part 5g), and C is the concentration of VOC in the influent wastewater (ppm by weight) for a quarter (as determined by Part 5b).

Condition # 22850

For: S-199 Emergency Standby Diesel Engine Genset (Flare Station); S-200 Emergency Standby Diesel Engine Genset (WWTP); S-201 Emergency Standby Diesel Engine Genset (Maintenance Shop)

- 1. The owner/operator shall not exceed 50 hours per year per engine for reliability-related testing. [Basis: "Stationary Diesel Engine ATCM" section 93115, title 17, CA Code of Regulations, subsection (e)(2)(A)(3) or (e)(2)(B)(3)]
- 2. The owner/operator shall operate each emergency standby engine only for the following purposes: to mitigate emergency conditions, for emission testing to demonstrate compliance with a District, State or Federal emission limit, or for reliability-related activities (maintenance and other testing, but excluding emission testing). Operating while mitigating emergency conditions or while emission testing to show compliance with District, State or Federal emission limits is not limited. [Basis: "Stationary Diesel Engine ATCM" section 93115, title 17, CA Code of Regulations, subsection (e)(2)(A)(3) or (e)(2)(B)(3)]
- 3. The owner/operator shall operate each emergency standby engine only when a non-resettable totalizing meter (with a minimum display capability of 9,999 hours) that measures the hours of operation for the engine is installed, operated and properly maintained. [Basis: "Stationary Diesel Engine ATCM" section 93115, title 17, CA Code of Regulations, subsection(e)(4)(G)(1)]
- 4. Records: The owner/operator shall maintain the following monthly records in a District-approved log for at least 36 months from the date of entry (60 months if the facility has been issued a Title V Major Facility Review Permit or a Synthetic Minor Operating Permit). Log entries shall be retained on-site, either at a central location or at the engine's location, and made immediately available to the District staff upon request.
 - a. Hours of operation for reliability-related activities (maintenance and testing).
 - b. Hours of operation for emission testing to show compliance with emission limits.
 - c. Hours of operation (emergency).
 - d. For each emergency, the nature of the emergency condition.
 - e. Fuel usage for each engine(s).

[Basis: "Stationary Diesel Engine ATCM" section 93115, title 17, CA Code of Regulations, subsection (e)(4)(I), (or, Regulation 2-6-501)]

Condition # 22850

For: S-199 Emergency Standby Diesel Engine Genset (Flare Station);

S-200 Emergency Standby Diesel Engine Genset (WWTP);

S-201 Emergency Standby Diesel Engine Genset (Maintenance Shop)

5. At School and Near-School Operation: If the emergency standby engine is located on school grounds or within 500 feet of any school grounds, the following requirements shall apply:

The owner/operator shall not operate each stationary emergency standby dieselfueled engine for non-emergency use, including maintenance and testing, during the following periods:

- a. Whenever there is a school sponsored activity (if the engine is located on school grounds)
- b. Between 7:30 a.m. and 3:30 p.m. on days when school is in session.

 "School" or "School Grounds" means any public or private school used for the purposes of the education of more than 12 children in kindergarten or any of grades 1 to 12, inclusive, but does not include any private school in which education is primarily conducted in a private home(s). "School" or "School Grounds" includes any building or structure, playground, athletic field, or other areas of school property but does not include unimproved school property.

[Basis: "Stationary Diesel Engine ATCM" section 93115, title 17, CA Code of Regulations, subsection (e)(2)(A)(1)] or (e)(2)(B)(2)]

123

VI. Permit Conditions

Condition # 24061

FOR: S-29 GREEN WASTE STOCKPILES

- 1. The total amount of green waste (grass clippings, yard waste, landscape waste, wood waste, shredded green waste, shredded wood waste, or similar materials) received at S-29 from off-site locations shall not exceed 68,040 tons during any consecutive 12-month period. Food wastes shall not be stored or processed at S-29. (Basis: Cumulative Increase)
- 2. The S-29 Green Waste Stockpiles shall be watered down, as frequently as necessary, to prevent visible dust emissions during loading or unloading, as long as watering does not create a fire hazard, decomposition, or odor. Dry, dusty material shall be watered down before unloading from truck beds, as necessary to prevent visible emissions, as long as watering does not create a fire hazard, decomposition, or odor. To ensure compliance with this part, the Permit Holder shall visually observe all unloading, stockpiling, and loading operations and shall immediately initiate corrective actions, if any visible dust emissions are detected. (Basis: Regulation 6-1-301 and Regulation 2-6-503)
- *3. Green waste shall be removed from the stockpiles, as frequently as necessary, to prevent decomposition and odors. (Basis: Regulation 1-301)
 - a. If any stockpile is deemed to be odorous by a District inspector, the odorous stockpile shall be removed within 24 hours.
 - b. If a District inspector finds odorous stockpiles associated with S-29 on two or more occasions during a 12-month period, the allowable stockpile storage time shall immediately be reduced to 7 days, and no green waste shall remain in a stockpile for more than 7 consecutive days.
 - c. If the plant receives two or more Violation Notices from the District for "Public Nuisance" in any consecutive 12 month period, the owner/operator of this facility shall submit to the District, within 30 days, an application to modify the Permit to Operate to include the following additional odor control measures, as applicable, or any other measures that the District deems necessary and appropriate.
 - i. Reduce the allowable stockpile storage time to 72 hours,
 - ii. Modify stockpile dimensions or other storage practices to ensure that decomposition will not occur during storage,
 - iii. Apply odor inhibitor solutions to the stockpiles at a District approved rate and frequency,
 - iv. Discontinue use of green waste stockpiles during the ozone season or other appropriate time period.

VI. Permit Conditions

Condition # 24061

FOR: S-29 GREEN WASTE STOCKPILES

- 4. In order to demonstrate compliance with Parts 1-3, the owner/operator shall maintain the records required below. All records shall be kept on site for a minimum of five years from the date of entry and shall be made available to District staff upon request. (Basis: Cumulative Increase and Regulations 2-6-501 and 6-1-301)
 - a. Record the date, time, and amount of green waste received at each stockpile, and note if the green waste load came form an off-site location or the onsite green waste grinding operation.
 - b. Summarize the total amount of green waste received from off-site locations for each month and for each consecutive rolling 12-month period.
 - c. Record the date and time that water was applied to the stockpiles or associated loading or unloading operations.
 - d. If a District inspector deems a stockpile to be odorous, record the date of inspection, the date the stockpile was declared odorous, the date the stockpile was removed, and describe what was done with the odorous stockpile.
 - e. If the Part 3b or 3c(i) stockpile storage time limitations become applicable, the owner/operator shall begin recording the date, time, and amount of green waste removed from the stockpiles and shall determine and record the maximum stockpile storage time for each month and for each consecutive rolling 12-month period.

VI. Permit Conditions

Condition # 24062

FOR: S-30 PORTABLE GREEN WASTE GRINDING OPERATION

- *1. The Portable Equipment Registration Permit (PERP) conditions issued by CARB for the S-30 Portable Green Waste Grinding Operation (PERP # 117640), or the PERP conditions for any equivalent PERP registered tub grinder used as S-30 instead of the PERP # 117640 tub grinder, are hereby incorporated by reference. (Basis: CARB PERP)
- 2. During any time that the S-30 Portable Green Waste Grinding Operation is operating at Site # A2066, the owner/operator shall visually observe all loading, unloading, and grinding operations to ensure that there are no visible emissions and to ensure that this operation complies with the Regulation 6-1-301 Ringelmann 1.0 limitation. If any visible dust emissions are detected, the owner/operator shall immediately initiate corrective actions to prevent visible emissions including watering down loads and applying water sprays to the grinding operation. (Basis: Regulations 2-6-503 and 6-1-301)
- 3. During any time that the S-30 Portable Green Waste Grinding Operation is operating at Site # A2066, the owner/operator maintain daily records of the operating times for this source and the amount of material processed by this source. All records shall be kept on site for a minimum of five years from the date of entry and shall be made available to District staff upon request. (Basis: Regulations 2-6-503 and 6-1-311)

VI. Permit Conditions

Condition # 24255

For: S-210 Liquefied Natural Gas Plants (LNG) Plant

- 1. The S-210 Liquefied Natural Gas (LNG) Plant shall only process landfill gas collected from Fill Area 1 of the S-2 Altamont Landfill. (Basis: Offsets)
- 2. The landfill gas feed rate to S-210 shall not exceed the equivalent heat input rate 1950 MM BTU during any one day. (Basis: Cumulative Increase)
- 3. All waste gas streams from S-210 which are generated during normal operations, during start-up procedures, during maintenance events, and during trips or other malfunctions shall be recycled back to LNG Plant processing equipment, shall be recycled back to the gas collection and control system, or shall be vented to the A-16 Landfill Gas Flare for further control. Each waste gas stream vented to A-16 shall be burned with a sufficient amount of supplemental landfill gas for A-16 to maintain compliance with all applicable requirements. (Basis: Cumulative Increase and Regulation 8-34-301.4)
- 4. In order to demonstrate compliance with Part 2, the owner or operator of the S-210 LNG Plant shall comply with all of the following monitoring and record keeping requirements. All records shall be kept on site or shall be made available to the District staff upon request. All records shall be retained for at least 5 years from the date of entry. (Basis: Cumulative Increase)
 - a. The S-210 LNG Plant shall be equipped with a continuous gas flow meter and recorder, which shall measure the inlet landfill gas flow rate to S-210 and shall meet the requirements of Regulation 8-34-508.
 - b. The owner or operator of S-210 shall measure and record the methane concentration in the landfill gas delivered to S-210 on a monthly basis.
 - c. On a monthly basis, the owner or operator of S-210 shall use the data collected pursuant to Parts 4a and 4b to calculate and record the maximum daily and total monthly heat input rate to the S-210 LNG Plant.
 - d. The owner or operator of S-210 shall summarize the Part 4c monthly heat input records for each consecutive rolling 12 month period.

127

Condition # 24373

FOR: ALL NON-MOBILE COMBUSTION EQUIPMENT AT SITE # A2066 INCLUDING BUT NOT LIMITED TO LANDFILL GAS FIRED DEVICES (A-15, A-16, S-6, AND S-7) AND DIESEL FIRED ENGINES (S-31, S-193, S-199, S-200, S-201 S-221, S-224, S-225, S-226, S-227, AND S-228):

1. Carbon monoxide (CO) emissions from each landfill gas fired combustion device located at Site # A2066 shall not exceed the emission rate identified below, during any consecutive rolling 12-month period. Each CO limit in this part is derived from but does not replace source-specific emissions related limitations that may be contained in other permit conditions for these devices. (Basis: Cumulative Increase and Regulation 2-1-301)

A-15 Landfill Gas Flare: 93.268 tons of CO per year
A-16 Landfill Gas Flare: 115.632 tons of CO per year
S-6 Gas Turbine: 56.064 tons of CO per year
S-7 Gas Turbine: 56.064 tons of CO per year

- 2. Total site-wide carbon monoxide (CO) emissions from all non-mobile combustion equipment located at Site # A2066 shall not exceed 225.0 tons of CO during any consecutive rolling 12-month period. For the purposes of this condition, non-mobile combustion equipment includes all stationary and portable combustion devices other than mobile sources, as defined in 40 CFR Part 51.50. (Basis: Regulation 2-1-403: Avoidance of PSD)
- 3. To demonstration compliance with Parts 1 and 2, the owner or operator of Site # A2066 shall comply with the following record keeping procedures. (Basis: Regulations 2-1-301 and 2-1-403)
 - a. For each stationary or portable non-mobile combustion device that is operated at Site # A2066 and has the potential to emit more than 2 tons per year of a regulated air pollutant, the owner or operator shall, on a monthly basis, calculate and record the CO emissions (tons of CO per calendar month) from the device. The CO emissions shall be calculated using District approved procedures, emission factors, and operating records, as described below for each type of device.

VI. Permit Conditions

Condition # 24373

FOR: ALL NON-MOBILE COMBUSTION EQUIPMENT AT SITE # A2066 INCLUDING BUT NOT LIMITED TO LANDFILL GAS FIRED DEVICES (A-15, A-16, S-6, AND S-7) AND DIESEL FIRED ENGINES (S-31, S-193, S-199, S-200, S-201, , S-221, S-224, S-225, S-226, S-227, AND S-228):

- i. For the A-15 and A-16 Landfill Gas Flares, the monthly CO emissions from each flare shall be calculated using the monthly heat input rate (MM BTU per month) to each flare and the District approved CO emission factor (pounds of CO per MM BTU). The monthly heat input rate to each flare is recorded pursuant to Condition # 19235, Part 15c. The District approved CO emission factor for each flare is the highest of the CO emission rates measured for any particular flare operating condition during the most recent annual source test for that flare. These CO emission rates shall be determined from data collected pursuant to Condition # 19235, Parts 13a-d.
- ii. For the S-6 and S-7 Gas Turbines, the monthly CO emissions from each turbine shall be calculated using the monthly heat input rate (MM BTU per month) to each gas turbine and the District approved CO emission factor (pounds of CO per MM BTU) for each turbine. The monthly heat input rate to each turbine shall be calculated from data recorded pursuant to Condition # 18773, Part 8. The District approved CO emission factor for each turbine is the CO emission rate reported during the most recent annual source test for that turbine pursuant to Condition # 18773, Part 11g.
- iii. DELETED

Condition # 24373

FOR: ALL NON-MOBILE COMBUSTION EQUIPMENT AT SITE # A2066 INCLUDING BUT NOT LIMITED TO LANDFILL GAS FIRED DEVICES (A-15, A-16, S-6, AND S-7) AND DIESEL FIRED ENGINES (S-31, S-193, S-199, S-200, S-201, S-221, S-224, S-225, S-226, S-227, AND S-228):

- iv. For diesel fired IC engines subject to this subpart (S-31, S-193, S-199, S-200, S-201, S-221, S-224, S-225, S-227, and S-228), the monthly CO emissions from each engine shall be calculated using the monthly operating rate (operating hours per month) for each engine, the rated power output (bhp) for each engine, the CARB certified emission factor (grams/bhp-hour) for each engine, and appropriate conversion factors. The monthly operating rates for each engine shall be determined from monthly records of the totalizing hour meter readings for each engine. If the engine is not equipped with a totalizing hour meter, monthly operating hours shall be determined based on daily operating time records for the engine while it is operating at this site.
- v. For any other types of combustion devices subject to this subpart, the monthly CO emissions shall be calculated using District approved monthly operating rate records and District approved CO emission factors. The District approved CO emission factors are the same as those described below in Part 3b(i-ii) The District approved operating rate records shall be expressed in units appropriate for the CO emission factor for that device. If the device is equipped with a totalizing hour meter, fuel flow meter, or other continuous meter, the owner or operator shall use monthly records of meter readings to determine the monthly operating rate. If the device is not equipped with a meter, the owner or operator shall use either daily operating records or monthly fuel usage records to determine the monthly operating rate.
- vi. The owner or operator shall maintain records of any supporting data used to determine the monthly CO emission rate from each device subject to this subpart. This data may include but is not limited to equipment capacities, fuels used, fuel heating values, certifications, guarantees, compliance demonstration test results, meter readings, operating records, calculation procedures, and conversion factors.

Condition # 24373

FOR: ALL NON-MOBILE COMBUSTION EQUIPMENT AT SITE # A2066 INCLUDING BUT NOT LIMITED TO LANDFILL GAS FIRED DEVICES (A-15, A-16, S-6, AND S-7) AND DIESEL FIRED ENGINES (S-31, S-193, S-199, S-200, S-201, S-221, S-224, S-225, S-226, S-227, AND S-228):

- vii. When CO emission factors need to be increased to reflect new source test data or new hand-held CO monitor data, the new emission factor shall become effective for the month in which the test was conducted and each subsequent month. If the new CO emission factor is lower than the factor currently in effect, the owner or operator has the option to continue using the higher factor and to not use this new lower factor. Any changes to the list of devices subject to this subpart, the CO emission factors, the monthly operating rates, and the resulting monthly CO emissions records shall be incorporated into these records within 6 months of the effective date of the new data.
- b. For each stationary or portable non-mobile combustion device that is operated at Site # A2066 and has the potential to emit 2 tons per year or less of a regulated air pollutant, the owner or operator shall maintain a record of the maximum potential annual CO emissions (tons of CO per year) from each subject device and the total monthly CO emissions potential (tons of CO per month) from all of these less than significant sources. The maximum potential annual CO emissions from each device and the total monthly CO emissions potential from all devices shall be calculated using District approved procedures, emission factors, and maximum operating rates, as described below.
 - For internal combustion engines, District approved emission factors include (in order of priority): CARB certified emissions factors, CARB tier standards, EPA tier standards, and AP-42 emission factors.
 - ii. For combustion devices other than engines, District approved emission factors include (in order of priority): factors derived from an applicable District, state, or federal standards; factors derived from manufacturer's not to exceed emission rate guarantees; and AP-42 emission factors.

131

Condition # 24373

FOR: ALL NON-MOBILE COMBUSTION EQUIPMENT AT SITE # A2066 INCLUDING BUT NOT LIMITED TO LANDFILL GAS FIRED DEVICES (A-15, A-16, S-6, AND S-7) AND DIESEL FIRED ENGINES (S-31, S-193, S-199, S-200, S-201, S-221, S-224, S-225, S-226, S-227, AND S-228):

- iii. The District approved maximum operating rate for a device is equal to: either the maximum rated output (bhp) for an IC engine or the maximum rated heat input (MM BTU per hour based on the HHV of the fuel) for other combustion devices multiplied by either the maximum possible or maximum allowable annual operating rate for the device. An annual operating rate of less than 8760 hours/year (24 hrs/day and 365 days/year) may only be used if the device is subject to a District permit condition, District regulation, state ATCM, or federal NSPS/NESHAP that limits the annual operating time for that device.
- iv. The maximum potential annual CO emissions (tons per year) from a device is equal to the District approved emission factor for the device multiplied by the District approved maximum operating rate for the device and any necessary conversion factors.
- v. The total monthly CO emissions potential from less than significant sources (tons of CO per month) is equal to the sum of the maximum potential annual CO emissions from all less than significant sources subject to this subpart divided by 12.
- vi. The owner or operator shall maintain records that identify all non-mobile combustion devices subject to this subpart. The owner or operator shall also maintain records of any data used to demonstrate that a source qualifies for this subpart or used to determine the maximum potential CO emissions from a device. This supporting data may include but is not limited to equipment capacities, fuels used, fuel heating values, certifications, guarantees, AP-42 emission factors, regulatory limits, calculation procedures, and conversion factors.

132

Condition # 24373

FOR: ALL NON-MOBILE COMBUSTION EQUIPMENT AT SITE # A2066 INCLUDING BUT NOT LIMITED TO LANDFILL GAS FIRED DEVICES (A-15, A-16, S-6, AND S-7) AND DIESEL FIRED ENGINES (S-31, S-193, S-199, S-200, S-201, S-206, S-208, S-221, S-224, S-225, S-226, S-227, AND S-228):

- vii. The total monthly CO emissions potential for less than significant sources shall be updated within 6 months of operating a new device to this site that is subject to this subpart. For PERP registered engines that may be changed or replaced frequently, the operator may determine a worst-case maximum potential annual CO emission rate for the activity based on the highest possible CO emission factor, the highest possible engine capacity, and the highest possible operating rate. If this worst-case engine scenario is used, total monthly CO emissions would not need to be updated for PERP engine replacements, provided the replacement PERP engine does not exceed any of the worst-case engine assumptions for that activity.
- c. Using the monthly CO emissions data from each device recorded pursuant to subparts a and b above, the owner or operator shall calculate and record the total monthly CO emissions from all non-mobile combustion devices operated at this site.
- d. Using the monthly site-wide CO emissions total from subpart c, the owner or operator shall calculate and record the total annual site-wide CO emissions from all non-mobile combustion devices, for each rolling consecutive 12-month period.
- e. All records required by Parts 3a-d above shall be available for District inspection within 6 months of the final APCO approval date for the Change of Conditions associated with Application # 18819. All records shall be kept on-site or made readily available to District staff upon request, and all records shall be retained for at least five years from the date of entry.

VI. Permit Conditions

Condition # 25723

For: S-99 Non-Retail Gasoline Dispensing Facility G # 7123

1. The owner/operator shall operate and maintain the Morrison Brothers EVR Phase I Vapor Recovery system, including all associated plumbing and components, in accordance with the most recent version of California Air Resources Board (CARB) Executive Order VR-402.

[Basis: Equipment Certification]

2. The owner/operator shall only install the Morrison Brothers EVR Phase I Vapor Recovery System on tanks meeting the Standing Loss Control requirements of CARB Executive Orders VR-301 or VR-302.Vapor

[Basis: Equipment Certification]

- 3. The owner/operator shall conduct and pass a Static Pressure Performance Test (CARB Test Procedure TP 206.3) at least once in each 12-month period. Measured leak rates of each component shall not exceed the levels specified in VR- 402. [Basis: Periodic Testing]
- 4. The owner/operator shall:
 - A. Notify Source Test by email (gdfnotice@baaqmd.gov) or Fax (510-758-3087), at least 48 hours prior to any required testing.
 - B. Submit test results in a District-approved format Within thirty (30) days of testing.
 - * For start-up tests results, cover sheet shall include the facility number (Facility ID) and application number of the Authority to construct permit.
 - * For annual test results, cover sheet shall include the facility number (Facility ID) and identified as Annual' in lieu of the application number.
 - * Test results shall be emailed (gdfresults@baaqmd.gov) or mailed to the District's main office.

[Basis: Regulation 2-1-403]

VI. Permit Conditions

Condition # 26179

FOR: S-99 NON-RETAIL GASOLINE DISPENSING FACILITY G # 7123

The owner/operator of the facility shall maintain the following records. Records shall be maintained on site and made available for inspection for a period of 24 months from the date the record is made.

1. Monthly totals of throughput (sales) of gasoline (all-grades) and other fuels pumped and summarized on an annual basis for each type of fuel (excluding diesel)

135

- 2. All scheduled testing and maintenance activities, including:
 - * the date of maintenance, inspection, failure and, if applicable, ISD alarm history;
 - * the date and time of maintenance call;
 - * the maintenance performed;
 - * certified technician ID number or name of individual conducting maintenance and their phone number;
 - * weekly, quarterly and annual inspection sheets.

[Basis: Record Keeping]

VII. APPLICABLE LIMITS & COMPLIANCE MONITORING REQUIREMENTS

This section has been included to summarize the applicable emission limits contained in Section IV, Source-Specific Applicable Requirements, of this permit. The following tables show the relationship between each emission limit and the associated compliance monitoring provisions, if any. The monitoring frequency column indicates whether periodic (P) or continuous (C) monitoring is required. For periodic monitoring, the frequency of the monitoring has also been shown using the following codes: annual (A), quarterly (Q), monthly (M), weekly (W), daily (D), hourly (H), or on an event basis (E). No monitoring (N) has been required if the current applicable rule or regulation does not require monitoring, and the operation is unlikely to deviate from the applicable emission limit based upon the nature of the operation.

This section is only a summary of the limits and monitoring requirements. In the case of a conflict with any requirement in Sections I-VI, the preceding sections take precedence over Section VII.

VIII. TEST METHODS

The test methods associated with the emission limit of a District regulation are generally found in Section 600 et seq. of the regulation. The following table indicates only the test methods associated with the emission limits included in Section VII, Applicable Limits & Compliance Monitoring Requirements, of this permit.

Table VIII
Test Methods

Applicable		
Requirement	Description of Requirement	Acceptable Test Methods
BAAQMD	Ringelmann No. 1 Limitation	Manual of Procedures, Volume I, Evaluation of Visible
6-1-301 and		Emissions; or
SIP 6-301		US EPA Reference Method 9, Visual Determination of the
		Opacity of Emissions from Stationary Sources
BAAQMD	Ringelmann No. 2 Limitation	Manual of Procedures, Volume I, Evaluation of Visible
6-1-303 and		Emissions; or
SIP 6-303		US EPA Reference Method 9, Visual Determination of the
		Opacity of Emissions from Stationary Sources
BAAQMD	Particulate Weight Limitation	Manual of Procedures, Volume IV, ST-15, Particulates Sampling,
6-1-310 and		or
SIP 6-310		For combustion equipment: US EPA Reference Method 5,
		Determination of Particulate Matter Emissions from Stationary
		Sources
BAAQMD	Process Weight Rate Based	Manual of Procedures, Volume IV, ST-15, Particulates Sampling,
6-1-311 and	Emissions Limits	or
SIP 6-311		US EPA Reference Method 5, Determination of Particulate Matter
		Emissions from Stationary Sources
BAAQMD	Total Organic Compound (TOC)	For Operations Other Than Aeration of VOC-Laden Soil: Manual
8-2-301 and	Mass and Concentration	of Procedures, Volume IV, ST-7, Organic Compounds; or US
SIP 8-2-301	Limitations for Miscellaneous	EPA Reference Method 25, Determination of Total Gaseous
	Operations	Nonmethane Organic Emissions as Carbon, or
		US EPA Reference Method 25A , Determination of Total Gaseous
		Organic Concentration Using a Flame Ionization Analyzer
		For Aeration of VOC Laden Soil: BAAQMD Regulation 8-40-604
		measurement procedures and US EPA Method 21, Determination
		of Volatile Organic Compound Leaks (or any method determined
		to be equivalent by the US EPA and approved by the APCO)
SIP 8-5-303.2	Gas Tight Requirement for PRV	US EPA Reference Method 21, Determination of Volatile Organic
		Compound Leaks

VIII. Test Methods

Table VIII Test Methods

Applicable		
Requirement	Description of Requirement	Acceptable Test Methods
BAAQMD	Vapor Tightness Requirement	Manual of Procedures, Volume IV, ST-38, Gasoline Dispensing
8-7-301.6		Facility Static Pressure Integrity Test Aboveground Vaulted
		Tanks or ARB Test Method TP 201.3B Determination of Static
		Pressure Performance of Vapor Recovery Systems of Dispensing
		Facilities with Above-Ground Storage Tanks
BAAQMD	Vapor Tightness Requirement	Manual of Procedures, Volume IV, ST-38, Gasoline Dispensing
8-7-302.5		Facility Static Pressure Integrity Test Aboveground Vaulted
		Tanks or ARB Test Method TP 201.3B Determination of Static
		Pressure Performance of Vapor Recovery Systems of Dispensing
		Facilities with Above-Ground Storage Tanks
BAAQMD	Liquid Removal Rate	Manual of Procedures, Volume IV, ST-37, Gasoline Dispensing
8-7-302.8		Facility Liquid Removal Devices or ARB Test Method TP-201.6
		Determination of Liquid Removal of Vapor Recovery Systems of
		Dispensing Facilities
BAAQMD	Liquid Retain from Nozzles	Manual of Procedures, Volume IV, ST-41, Gasoline Liquid
8-7-302.12		Retention in Nozzles and Hoses (this method has not been
		approved yet)
BAAQMD	Nozzle Spitting	Manual of Procedures, Volume IV, ST-41, Gasoline Liquid
8-7-302.13		Retention in Nozzles and Hoses (this method has not been
		approved yet)
BAAQMD	POC Leaks	US EPA Reference Method 21, Determination of Volatile Organic
8-8-303 and		Compound Leaks
8-8-204		
BAAQMD	VOC Leaks	US EPA Reference Method 21, Determination of Volatile Organic
8-18-301-305		Compound Leaks
BAAQMD	Collection and Control System	US EPA Reference Method 21, Determination of Volatile Organic
8-34-301.2	Component Leak Limitations	Compound Leaks
BAAQMD	NMOC Emission Limits for	Manual of Procedures, Volume IV, ST-7, Organic Compounds
8-34-301.3	Enclosed Flares	and ST-14, Oxygen, Continuous Sampling; or
		US EPA Reference Methods 18, 25, 25A, or 25C
BAAQMD	NMOC Emission Limits for	Manual of Procedures, Volume IV, ST-7, Organic Compounds
8-34-301.4	Other Control Devices	and ST-14, Oxygen, Continuous Sampling; or
		US EPA Reference Methods 18, 25, 25A, or 25C
BAAQMD	Landfill Surface Leak Limit	US EPA Reference Method 21, Determination of Volatile Organic
8-34-303		Compound Leaks
BAAQMD	Wellhead Gauge Pressure	APCO Approved Device
8-34-305.1		

VIII. Test Methods

Table VIII Test Methods

Applicable		
Requirement	Description of Requirement	Acceptable Test Methods
BAAQMD	Wellhead Temperature	APCO Approved Device
8-34-305.2		
BAAQMD	Wellhead Nitrogen	US EPA Reference Method 3C, Determination of Carbon
8-34-305.3		Dioxide, Methane, Nitrogen, and Oxygen from Stationary Sources
BAAQMD	Wellhead Oxygen	US EPA Reference Method 3C, Determination of Carbon
8-34-305.4		Dioxide, Methane, Nitrogen, and Oxygen from Stationary Sources
BAAQMD	Compliance Demonstration Test	US EPA Reference Method 18, Measurement of Gaseous Organic
8-34-412		Compound Emissions by Gas Chromatography, Method 25,
		Determination of Total Gaseous Nonmethane Organic Emissions
		as Carbon, Method 25A, Determination of Total Gaseous Organic
		Concentration Using a Flame Ionization Analyzer, or Method
		25C, Determination of Nonmethane Organic Compounds
		(NMOC) in MSW Landfill Gases
BAAQMD	Organic Content Limit for Small	BAAQMD 8-40-601 and
8-40-116.2	Volume Exemption	US EPA Reference Methods 8015B and 8021B
BAAQMD	Limits on Uncontrolled Aeration	BAAQMD 8-40-601 and US EPA Reference Methods 8015B and
8-40-301	of Contaminated Soil	8021B; or
		US EPA Reference Method 21
BAAQMD	Limitations on Ground Level	Manual of Procedures, Volume VI, Part 1, Ground Level
9-1-301	Concentrations (SO ₂)	Monitoring for Hydrogen Sulfide and Sulfur Dioxide
BAAQMD	General Emission Limitation	Manual of Procedures, Volume IV, ST-19A, Sulfur Dioxide,
9-1-302	(SO ₂)	Continuous Sampling
BAAQMD	Liquid Fuel Sulfur Content	Manual of Procedures, Volume III, Method 10, Determination of
9-1-304		Sulfur in Fuel Oil
BAAQMD	Limitations on Hydrogen Sulfide	Manual of Procedures, Volume VI, Part 1, Ground Level
9-2-301		Monitoring for Hydrogen Sulfide and Sulfur Dioxide
BAAQMD	Waste Derived Fuel Gas NO _x	Manual of Procedures, Volume IV, ST-13A, Oxides of Nitrogen
9-8-302.1	Limits for Lean Burn Engines	and ST-14, Oxygen, Continuous Sampling
and		
SIP 9-8-302.1		
BAAQMD	Waste Derived Fuel Gas CO	Manual of Procedures, Volume IV, ST-6, Carbon Monoxide,
9-8-302.3	Limits	Continuous Sampling and ST-14, Oxygen, Continuous Sampling
and		
SIP 9-8-302.3		

VIII. Test Methods

Table VIII Test Methods

Applicable		
Requirement	Description of Requirement	Acceptable Test Methods
BAAQMD	NO _x Emission Limit for	For Source Tests: Manual of Procedures, Volume IV, ST-13A,
9-8-304.1	Compression-Ignited Engines	Oxides of Nitrogen, Continuous Sampling and ST-14, Oxygen,
	(51 to 175 bhp)	Continuous Sampling; and
		For Quarterly Compliance Checks Conducted Pursuant to
		Regulation 9-8-503: Portable NO _x , and O ₂ Analyzers calibrated
		and used in accordance with manufacturer's recommended
		procedures with NO _x readings averaged over a consecutive 15-
		minute period
BAAQMD	CO Emission Limit for	For Source Tests: Manual of Procedures, Volume IV, ST-6,
9-8-304.1	Compression-Ignited Engines	Carbon Monoxide, Continuous Sampling and ST-14, Oxygen,
	(51 to 175 bhp)	Continuous Sampling; and
		For Quarterly Compliance Checks Conducted Pursuant to
		Regulation 9-8-503: Portable CO and O ₂ Analyzers calibrated and
		used in accordance with manufacturer's recommended procedures
BAAQMD	NO _x Emission Limit	For Source Tests: Manual of Procedures, Volume IV, ST-13A,
9-8-305	(delayed compliance option)	Oxides of Nitrogen, Continuous Sampling and ST-14, Oxygen,
	for Compression-Ignited Engines	Continuous Sampling; and
	(model year 1996 or later)	For Quarterly Compliance Checks Conducted Pursuant to
		Regulation 9-8-503: Portable NO _x , and O ₂ Analyzers calibrated
		and used in accordance with manufacturer's recommended
		procedures with NO _x readings averaged over a consecutive 15-
		minute period
BAAQMD	CO Emission Limit	For Source Tests: Manual of Procedures, Volume IV, ST-6,
9-8-305	(delayed compliance option)	Carbon Monoxide, Continuous Sampling and ST-14, Oxygen,
	for Compression-Ignited Engines	Continuous Sampling; and
	(model year 1996 or later)	For Quarterly Compliance Checks Conducted Pursuant to
		Regulation 9-8-503: Portable CO and O ₂ Analyzers calibrated and
		used in accordance with manufacturer's recommended procedures
BAAQMD	NO _x Limit for Gas Turbines	Manual of Procedures, Volume IV, ST-13A, Oxides of Nitrogen,
9-9-301.1		Continuous Sampling and ST-14, Oxygen, Continuous Sampling
and		
SIP 9-9-301.1		
BAAQMD	NO _x Limit for Gas Turbines	Manual of Procedures, Volume IV, ST-13A, Oxides of Nitrogen,
9-9-301.2		Continuous Sampling and ST-14, Oxygen, Continuous Sampling

IX. PERMIT SHIELD

A. SUBSUMED REQUIREMENTS

Pursuant to District Regulations 2-6-233.2 and 2-6-409.12, as of the date this permit is issued, the federally enforceable monitoring, recordkeeping, and reporting requirements cited in the following table for the source or group of sources identified at the top of the table are subsumed by the monitoring, recordkeeping, and reporting for more stringent requirements or by a "hybrid" monitoring scheme. The District has determined that compliance with the requirements listed below and elsewhere in this permit will assure compliance with the substantive requirements of the subsumed monitoring requirements. Enforcement actions and litigation may not be initiated against the source or group of sources covered by this shield based on the subsumed monitoring requirements cited.

Table IX-A

Requirement		Streamlined	
Citation	Title or Description	Requirements	Title or Description
8-2-601	Determination of Compliance	8-40-604	Measurement of Organic Concentration (to
	(for organic compound		classify soil as "contaminated" or "not
	emissions as total carbon)		contaminated")

The Regulation 8, Rule 2 total carbon test procedure is subsumed by the Regulation 8, Rule 40 VOC test procedure for the S-43 Altamont Landfill - Waste and Cover Material Dumping Operations, because testing performed pursuant to Regulation 8-40-604 will rule out the need to test in accordance with Regulation 8-2-601.

Regulation 8, Rule 2 "Miscellaneous Operations" is only applicable to sources of precursor organic compounds that are not otherwise limited by Regulation 8 or Regulation 10 rules. In the case of an active landfill, the storage, handling, reuse (such as for cover material), and disposal of soil that contains volatile organic compounds (VOC) results in the transfer of some of the VOCs from the soil into the atmosphere. This pollutant transfer process is called aeration. Soil which has an organic content exceeding 50 ppmw or that registers an organic concentration greater than 50 ppmv (expressed as methane, C1) at the soil surface is defined as "contaminated" soil in Regulation 8-40-205. VOC-laden soil is soil that contains some VOCs but that has less VOCs than the contaminated soil thresholds above. The aeration of contaminated soil is subject to Regulation 8, Rule 40. However, the aeration of the low concentration VOC-laden soils is subject to Regulation 8, Rule 2.

Regulation 8-2-301 limits organic compound emissions (expressed as total carbon) from an operation to 15 pounds per day, if the emission from the operation has an

IX. Permit Shield

organic compound concentration greater than 300 ppmv (expressed as total carbon, dry basis). Thus, an operator may verify compliance with Regulation 8-2-301 by either demonstrating compliance with the 15 pound/day total carbon limit or by demonstrating compliance with the 300 ppmv total carbon concentration limit. Condition # 19235, Part 20 identifies these two compliance options. Part 20a specifies emission limits, acceptance limits, emission calculation procedures, and record keeping requirements that assure compliance with the 15 pound/day total carbon emission limit. Part 20b discusses the alternative measures that may be used to verify compliance with the 300 ppmv total carbon concentration limit.

If the operator chooses to demonstrate compliance with Regulation 8-2-301 using Condition #19235 Part 20b, the operator will be required to use the Regulation 8-40-604 test procedures to verify that the soil is not contaminated (i.e., does not contain more than 50 ppmw of VOC or will not emit more than 50 ppmv of VOC from the surface of the soil). Since soil found not to be contaminated using the procedures of Regulation 8-40-604 will have a surface VOC concentration of less than 50 ppmv (expressed as methane, C1) it can reasonably be assumed that the concentration that occurs in the atmosphere during aeration of VOC-laden soil will also be less than 300 ppmv (total carbon, dry basis) as determined by the procedures of Regulation 8-2-601. Since this VOC-laden soil aeration operation will comply with the total carbon concentration limit (< 300 ppmv), it will also comply with Regulation 8-2-301.

In summary, measurements conducted under Regulation 8-40-604 that show surface VOC concentrations are less than 50 ppmv (expressed as methane, C1) are conclusive to demonstrate that any aeration of such soil will comply with Regulation 8-2-301.

198

X. REVISION HISTORY

Title V Permit Issuance (Application # 25828):

December 1, 2003

Significant Revision (Application #8324):

February 5, 2004

- Modify Permit Condition # 19237, Parts 4, 9, 10, and 11 to revise monitoring procedures for the internal combustion engines (S-23 and S-24).
- Revise Tables IV-D, VII-D, and VIII to reflect revisions to Condition # 19237.
- Make minor corrections to requirements in Tables III, IV-A, IV-B, IV-D, and IV-E.

Minor Revision (Application #9326):

December 21, 2004

 Revise minimum combustion chamber discharge temperature in Permit Condition # 18773, Part 9 and in Table VII-B.

Significant Revision (Application #8583):

December 21, 2004

- In Table II-A, add maximum firing capacity to the equipment descriptions for the S-6 and S-7 Gas Turbines.
- In accordance with the July 2004 amendments of 40 CFR Part 60, Subpart GG, delete the Custom Schedule of Compliance in Section V.B. Update citation references, monitoring requirements, and test methods in Tables IV-B, VII-B, and VIII.
- Amend the turbine NOx and CO emission limits in Section VI, Condition # 18773, Parts 1 and 2 and in Table VII-B.
 Revise the basis for Parts 1 and 2 in Table IV-B.
- Delete the turbine NMOC concentration limit from Section VI, Condition # 18773, Part 3 and from Tables IV-B and VII-B.
- Add daily and annual heat input limits for the turbines to Section VI, Condition # 18773, Part 8, and to Table IV-B and VII-B.
- Add the BACT fuel sulfur content limit for the turbines to Section VI, Condition # 18773, Part 10 and to Tables IV-B and VII-B.
- Clarify turbine source testing requirements and calculation procedures in Section VI, Condition # 18773, Part 11, and in Tables VII-B and VIII.
- Correct citations in Tables IV-A, IV-B, IV-D, VII-A, VII-B, and VII-D.
- Change the Responsible Official to Mr. Ken Lewis pursuant to a July 20, 2004 petition from the facility.
- Update Section X, Revision History.

X. Revision History

Minor Revision (Application # 10013):

December 21, 2004

- For the S-23 and S-24 IC Engines, revise the maximum CO concentration (when measured using a portable analyzer) and the CO/NMOC correlation ratio in Condition # 19237, Parts 9 and 10g and in Table VII-D based on recent source test data, which showed compliance with the NMOC outlet concentration limit at a higher CO concentration and a higher correlation ratio.
- Delete the S-25 and S-26 LNG Plants from Table II, delete all of Tables IV-E and VII-E, delete Condition # 19238, and remove related test methods from Table VIII, because the LNG Plants were never installed and the Authority to Construct has expired.
- Revise Condition # 19235, Parts 2 and 16 and Condition # 19237, Part 1 to reflect the deletion of S-25 and S-26 from this permit but continue to allow for the possibility of landfill gas treatment in an off-site LNG Plant with on-site combustion of LNG Plant waste gas.
- Renumber Tables IV-F-J and VII-F-J as Tables IV-E-I and VII-E-I.
- Update Section X, Revision History.

Minor Revision (Application # 2653):

April 5, 2005

• Revise gasoline throughput limit for S-99 in Condition # 20813, Part 1 and Table VII-E.

Minor Revision (Applications # 7326 and 10004):

April 5, 2005

• Modify collection system description in Table II-A and Condition # 19235, Part 1.

Minor Revision (Applications # 10514 and 10515):

April 5, 2005

- Revise wastewater throughput limits for S-140 and S-141 in Tables II-A and VII-F and in Condition # 20922, Parts 1 and 2.
- Increase the inlet VOC concentration limit for S-140 and S-141 in Condition # 20922, Parts 1 and 2 and in Table VII-F.
- Change the VOC concentration limit in Condition # 20922, Part 2 and Table VII-F from an annual average limit to a peak weighted average limit and modify the associated record keeping requirements in Condition # 20922, Parts 5b and 5c.
- Increase the inlet 1,4 dichlorobenzene concentration limit for S-140 and S-141 in Table VII-F and Condition # 20922, Part 3.

200

X. Revision History

- Revise basis for Condition # 20922, Parts 1, 2, 4, and 5 and update Table IV-F accordingly.
- Update Table III to reflect federal SIP adoptions and rule amendments and to add two new California ATCMs related to asbestos.
- Add the term, ATCM, to the Glossary.
- Update Section X, Revision History.

Administrative Amendment (Applications # 11125 and 11126):

October 4, 2005

- Modify TAC Concentration limits in Condition # 19235, Part 12 (non-FE) and Table VII-A.
- Correct the web site address for SIP requirements in Section XII.

Significant Revision (Application #9527):

December 15, 2005

- Modify Condition # 19235, Part 20 by adding VOC surface concentration limits and monitoring procedures, which will ensure that VOC-laden wastes are not contaminated soil and that aeration of VOC-laden wastes will comply with the total carbon concentration limit in Regulation 8-2-301.
- Reference the new VOC surface concentration monitoring procedures in Table VII-A.
- In Table VIII, identify test methods for VOC surface concentration measurements and VOC emission limits that apply to the aeration of VOC-laden wastes.
- Add a permit shield in Section IX that applies to the aeration of VOC-laden wastes and the resulting fugitive organic emissions. The permit shield subsumes a stack test method for total carbon and replaces it with a VOC surface concentration measurement.
- Update Section X, Revision History.

Administrative Amendment (Application # 14713):

May 17, 2007

• Remove S-191 and S-192 Diesel Engines from Tables II-A, IV-H, and VII-H and from Condition # 20801.

Minor Revision (Application # 14713):

July 17, 2007

- Correct the daily wastewater throughput limit in Condition # 20922, Part 1a.
- Revise the VOC concentration limit for wastewater in Condition # 20922, Parts 1a and 2a and in Table VII-F.
- Add POC emission limits for the Aerated Biological Reactors to Condition # 20922, Parts 1b and 2b and to Table VII-F.

X. Revision History

- Add POC emission calculation procedures to Condition # 20922, Part 5 and to Table VIII.
- Add a compliance date for maintaining POC emission records to Condition # 20922, Part 6.
- Make editorial corrections to Condition # 20922 and to Tables IV-F, VII-F, and VIII.
- Update Section X Revision History

Minor Revision (Application # 15454):

• Clarify the daily CO monitoring requirements for the S-23 and S-24 IC Engines in Condition # 19237, Part 9.

Minor Revision (Application # 16864):

October 9, 2008

December 11, 2007

- Update gas collection system description in Table II-A and in Condition # 19235, Part 1(a-b).
- Add less than continuous operating provisions for individual gas collection system components to Condition # 19235, Part 1c and to Tables IV-A and VII-A.
- Add an alternative wellhead Temperature Limit, a
 Wellhead CO Limit, and Associated Monitoring
 Requirements to Condition # 19235, Part 1d and to Tables
 IV-A, VII-A, and VIII.
- Make editorial corrections to Tables IV-A and VII-A and to Condition # 19235, Parts 2, 12, 15, 20, 21, and 22.
- Update Section X, Revision History.

Renewal Revision (Application # 18233):

December 19, 2012

- Add and revise text in Sections I, III, IV, VII, and VIII to conform to current standard text.
- Correct and update regulatory references and amendment dates throughout the permit.
- Create two new tables in Section II: Table II-C to identify significant sources and Table II-D to identify exempt equipment.
- Incorporate source number changes into this permit that were implemented pursuant to the BAAQMD annual permit renewal process. The active landfill, Source S-2, was split into three sources (S-2, S-43, and S-44) that represent different processes and activities that occur at active landfills. The new source numbers were added to Tables II-A, IV-A, VII-A, IX-A and Condition # 19235.
- Remove sources that have been shut down from Table II-A (S-190, S-194, S-195, S-196, S-197, and S-198), delete the

202

X. Revision History

associated tables (Tables IV-G and VII-G for S-190 and Tables IV-I and VII-I for S-194, S-195, and S-196), remove S-197 and S-198 from Tables IV-H and VII-H, and delete or revise the associated permit conditions (BAAQMD Condition #20800, #20801, and #20812).

- Add new equipment identified in BAAQMD NSR Application # 17215 to the permit. Add the S-29 Green Waste Stockpiles to Table II-A, create the associated Tables IV-E and VII-E, and add the associated Condition #24061. Add a significant source (S-30 Portable Green Waste Grinding Operation) to Table II-C, create Tables IV-F and VII-F for S-30, and add Condition #24062. Add the exempt portable engine that provides power to S-30 (S-31 PERP Diesel Engine for Green Waste Grinder) to Table II-D.
- Add new equipment identified in BAAQMD NSR Application # 16526 to the permit. Add three emergency standby diesel engines (S-199, S-200, and S-201) to Table II-A, create the associated Tables IV-J and VII-J, and add Condition #22850.
- Add new equipment identified in BAAQMD NSR Application # 19045 to the permit. Add the S-210 Liquefied Natural Gas Plant to Table II-A, create the associated Tables IV-K and VII-K, and add Condition #24255.
- Add new equipment identified in BAAQMD NSR Application # 19206 to the permit. Add the A-16 Landfill Gas Flare to Tables II-A, IV-A, and VII-A, and to Condition #19235.
- Add exempt portable engines and the associated control devices
 (S-206, A-206, S-208, A-208, S-217, A-207, S-218, A-209) described in BAAQMD NSR Permit Applications #17305 and #21312 to Table II-D.
- Add several missing BAAQMD and federal regulations to Table III, and add several new California regulations to Table III.
- Renumber Tables IV-E and VII-E as Tables IV-G and VII-G, Tables IV-F and VII-F as Tables IV-H and VII-H, and Tables IV-H and VII-H as Tables IV-I and VII-I.
- Add public nuisance restriction to Table IV-A
- SIP Regulation 6 was revised and renumbered as BAAQMD Regulation 6, Rule 1. Incorporate these changes into Tables IV-A, IV-B, IV-D, IV-I, VII-A, VII-B, VII-D, and VII-I and in Condition # 19235.

X. Revision History

- Throughout the permit, replace condition bases citing the Toxic Risk Management Policy (TRMP) with the appropriate regulatory citation from BAAQMD Regulation 2, Rule 5, which was adopted in 2005 and amended in 2010.
- For the Altamont Landfill (S-2, S-43, and S-44) and associated flares (A-15 and A-16), update Tables IV-A, VII-A, and VIII and Condition #19235 by incorporating changes made pursuant to: NSR Application #14814 for a landfill expansion. These revisions include the addition of future applicable NSPS requirements: 40 CFR Part 60, Subpart WWW. Also, incorporate landfill gas collection system changes made pursuant to Applications #15948, #20251, and #23198 and permit corrections made pursuant to Applications #21044 and #22039.
- Add Condition # 24373, which established a site-wide cap on CO emissions pursuant to BAAQMD NSR Application #18819, to Tables IV-A, VII-A, IV-B, VII-B, IV-D, VII-D, IV-I, VII-I, IV-J, and VII-J.
- In Tables IV-B and VII-B, add the revisions to BAAQMD Regulation 9 Rule 9, remove non-applicable federal provisions related to landfill gas control, and add the new gas turbine NESHAP (40 CFR Part 63, Subpart YYYY).
- In Tables IV-C and VII-C, add the revisions to BAAQMD Regulation 8 Rule 8.
- In Tables IV-D and VII-D, add the revisions to BAAQMD Regulation 9 Rule 8, remove non-applicable federal provisions related to landfill gas control, and add the new IC engine NESHAP (40 CFR Part 63, Subpart ZZZZ).
- In Tables IV-G and VII-G, add the missing requirements from SIP Regulation 8 Rule 5 and the new NESHAP requirements from 40 CFR Part 63, Subpart CCCCCC.
- In Table IV-H and Condition # 20922 delete Part 6 because it is obsolete.
- In Tables IV-I and VII-I, add the revisions to BAAQMD Regulation 9 Rule 8, the new IC engine NESHAP (40 CFR Part 63, Subpart ZZZZ), and the CARB ATCM for stationary diesel engines.
- In Condition # 16516, replace the current text with revised standard text for GDFs.
- Update Conditions #18873 and #19237 pursuant to condition changes requested in Application # 22039.
- In Condition # 20801, Part 2, add the ability to use purchase records for CARB diesel fuel instead of records of vendor

X. Revision History

fuel oil sulfur content certifications as a means of demonstrating compliance with the Regulation 9-1-304 liquid fuel sulfur content limit.

- In Condition # 24062, add monitoring requirements in Parts 2 and 3 to demonstrate compliance with BAAQMD Regulation 6, Rule 1 and SIP Regulation requirements.
- Add symbols to Tables VII-A through VII-I to clarify limits.
- For Table VIII, add missing test methods for existing requirements, add test methods for all new limits, and remove obsolete or unnecessary test methods.
- Clarify the applicability of the permit shield in Section IX.
 It applies to the aeration of VOC-laden soil, which may occur at S-43 during the transfer, storage, or re-use of VOC-laden.
- Add this permit renewal to the Section X Revision History.
- Add terms to the Section XI Glossary.

Administrative Amendment (Application # 23962):

May 28, 2013

- Correct typographical errors in TAC concentration limits listed in Condition # 19235, Part 12 and in Table VII-A.
- Increase ethylene dichloride limit in Condition # 19235, Part 12 and in Table VII-A.

Administrative Amendment (Application # 24727):

May 12, 2014

- Add two portable CNG-fired engines (S-221 and S-222) to Table II-D.
- Add Application #24727 changes to Section X Revision History.

Administrative Amendment (Application # 26432):

December 16, 2019

- Increase the benzene limits in Condition # 19235, Part 12 and in Table VII-A.
- Add the Application #26432 changes to the Section X Revision History.

Administrative Amendment (Application # 27293):

December 16, 2019

- Increased the ethylene dichloride limit in Condition #19235, Part 12 of Section VI and in Table VII-A
- Decreased the ethyl benzene, ethylidene dichloride, perchloroethylene, and vinyl chloride limits in Condition #19235, Part 12 in Section VI and in Table VII-A.
- Add Application #27293 changes to the Section X Revision History

X. Revision History

Minor Revision (Application # 27339):

December 16, 2019

- Increased the decomposable material limit in Fill Area 2 in Table II-A
- Increased the decomposable material limit in Fill Area 1 in Condition #19235, Part 18 in Section VI and Table VII-A
- Add Application #27339 changes to the Section X Revision History

Minor Revision (Application # 27662):

December 16, 2019

- Add two portable diesel-fired engines (S-224 and S-225) to Table II-D.
- Removed two portable diesel-fire engines (S-217 and S-218) from Table II-D
- Add Application #27662 changes to Section X Revision History.

Minor Revision (Application # 28273):

December 16, 2019

- Revised the average combustion temperature range in Condition #18773, Part 9 in Section VI and in Table VII-B
- Add Application #28273 changes to Section X Revision History

Title V Renewal (Application # 28704):

December 16, 2019

- Update title page
- Add and revise text in Section I, III, IV to conform with current standard text.
- Updated the number of active vertical wells, horizontal collectors, and leachate collection risers for S-2 in Table II-A
- Delete two internal combustion engines (S-23 and S-24) from Table II-A
- Delete S-206 and S-208 from Table II-D. This portable engine has been permanently removed from the site.
- In Table IV-A, Regulation 6, Rule 6 is added, the future effective date for Fill Area 2 in S-2 is removed, and Part 16 pertaining to S-23 and S-24 is removed from the table.
- Delete Table IV-D for S-23 and S-24 and adjusted the table references accordingly.
- In Section VI, Condition #19235 Part 1a and 1b have been updated to reflect the changes to the landfill gas collection system, updated the list of wells that are subject to alternative wellhead temperature limits in Part 1(d)(ii), and Part 17 was updated to reflect the correct mailing address. Since S-23 and S-24 have been permanently removed from

206

X. Revision History

the site, Condition #19235 Part 2, line 4, Part 16, Condition #19237, and Condition #24373 Part 3a(iii) have been deleted. Condition #19235, Part 13 was edited to reflect the changes to the landfill gas flare per NSR Application #28264. In Condition #24373, updated the diesel sources at the site.

- In Table VII-A, the future effective date for Fill Area 2 of S-2 is removed from the table, updated the monitoring requirements for A-15 and A-16 per NSR Application #24373, and added requirements per Regulation 6, Rule 6.
- Removed Table VII-D since it pertains to S-23 and S-24 internal combustion engines which were removed from the site. The subsequent tables were reordered accordingly.
- Add Application #28704 changes to Section X Revision History.

Minor Revision (Application # 29133):

December 16, 2019

- Add one portable diesel-fired engine (S-228) to Table II-D.
- Removed one portable CNG-fire engine (S-222) from Table II-D
- Add Application #29133 changes to Section X Revision History.

Minor Revision (Application # 29738):

December 16, 2019

- In Table II-A, updated the name of the Phase I system and the size of the gasoline and diesel tanks for S-99.
- In Table IV-F, California Air Resource Board (CARB) Executive Order G-70-52-AM, VR-301-G, VR-302-G, and VR-402-D are added as applicable requirements. In Condition #16516 is replaced with Condition #25723 and #26179.
- In Section VI, Condition #16516 is removed and replaced with Condition #25723 and #26179.
- In Table VI-F, CARB Executive Order G-70-116-F for the Phase I System is replaced by Executive Order VR-301-G, VR-302-G, VR-402-G and Condition #16516 is replaced by Condition #25723 for the monitoring requirements.
- Add Application #29738 changes to Section X Revision History

XI. GLOSSARY

ACT

Federal Clean Air Act

ALRRF

Altamont Landfill and Resource Recovery Facility

AP-42

An EPA Document "Compilation of Air Pollution Emission Factors" that is used to estimate emissions from numerous source types. It is available electronically from EPA's web site at: http://www.epa.gov/ttn/chief/ap42/index.html

APCO

Air Pollution Control Officer: Head of Bay Area Air Quality Management District

ARB

Air Resources Board (same as CARB)

ASTM

American Society for Testing and Materials

ATC

Authority to Construct

ATCM

Airborne Toxic Control Measure

BAAOMD

Bay Area Air Quality Management District

BACT

Best Available Control Technology

BARCT

Best Available Retrofit Control Technology

Basis

The underlying authority that allows the District to impose requirements.

C1

An organic chemical compound with one carbon atom, for example: methane

C3

An organic chemical compound with three carbon atoms, for example: propane

C5

An organic chemical compound with five carbon atoms, for example: pentane

C6

An organic chemical compound with six carbon atoms, for example: hexane

C₆H₆

Benzene

CAA

The federal Clean Air Act

CAAQS

California Ambient Air Quality Standards

CAPCOA

California Air Pollution Control Officers Association

CARB

California Air Resources Board (same as ARB)

CCDT

Combustion Chamber Discharge Temperature (for gas turbines)

CCR

California Code of Regulations

CEC

California Energy Commission

CEM

A "continuous emission monitor" is a monitoring device that provides a continuous direct measurement of some pollutant (e.g. NOx concentration) in an exhaust stream.

CEQA

California Environmental Quality Act

CFR

The Code of Federal Regulations. 40 CFR contains the implementing regulations for federal environmental statutes such as the Clean Air Act. Parts 50-99 of 40 CFR contain the requirements for air pollution programs.

CH4 or CH4

Methane

CI

Compression Ignition

CIWMB

California Integrated Waste Management Board

CO

Carbon Monoxide

CO2 or CO2

Carbon Dioxide

CO₂e

Carbon Dioxide Equivalent. A carbon dioxide equivalent emission rate is the emission rate of a greenhouse gas compound that has been adjusted by multiplying the mass emission rate by the global warming potential of the greenhouse gas compound. These adjusted emission rates for individual compounds are typically summed together, and the total is also referred to as the carbon dioxide equivalent (CO2e) emission rate.

CT

Cylinder Temperature (for internal combustion engines)

Cumulative Increase

The sum of permitted emissions from each new or modified source since a specified date pursuant to BAAQMD Rule 2-1-403, Permit Conditions (as amended by the District Board on 7/17/91) and SIP Rule 2-1-403, Permit Conditions (as approved by EPA on 6/23/95). Used to determine whether threshold-based requirements are triggered.

CZT

Combustion Zone Temperature (for flares)

District

The Bay Area Air Quality Management District

E6, E9, E12

Very large or very small number values are commonly expressed in a form called scientific notation, which consists of a decimal part multiplied by 10 raised to some power. For example, 4.53E6 equals $(4.53) \times (106) = (4.53) \times (10x10x10x10x10x10) = 4,530,000$. Scientific notation is used to express large or small numbers without writing out long strings of zeros.

EG

Emission Guidelines

EO

Executive Order

EPA

The federal Environmental Protection Agency.

Excluded

Not subject to any District regulations.

Federally Enforceable, FE

All limitations and conditions which are enforceable by the Administrator of the EPA including those requirements developed pursuant to 40 CFR Part 51, subpart I (NSR), Part 52.21 (PSD), Part 60 (NSPS), Part 61 (NESHAPs), Part 63 (MACT), and Part 72 (Permits Regulation, Acid Rain), including limitations and conditions contained in operating permits issued under an EPA-approved program that has been incorporated into the SIP.

FP

Filterable Particulate as measured by BAAQMD Method ST-15, Particulate.

FR

Federal Register

GDF

Gasoline Dispensing Facility

GHG

Greenhouse Gas

GLM

Ground Level Monitor

Grains

1/7000 of a pound

GWP

Global Warming Potential. A comparison of the ability of each greenhouse gas to trap heat in the atmosphere relative to that of carbon dioxide over a specific time period.

H2S or H2S

Hydrogen Sulfide

H2SO4 or H2SO4

Sulfuric Acid

H&SC

Health and Safety Code

HAP

Hazardous Air Pollutant. Any pollutant listed pursuant to Section 112(b) of the Act. Also refers to the program mandated by Title I, Section 112, of the Act and implemented by 40 CFR Part 63.

Hg

Mercury

HHV

Higher Heating Value. The quantity of heat evolved as determined by a calorimeter where the combustion products are cooled to 60 °F and all water vapor is condensed to liquid.

IC

Internal Combustion

LEA

Local Enforcement Agency

LFG

Landfill gas

LHV

Lower Heating Value. Similar to the higher heating value (see HHV) except that the water produced by the combustion is not condensed but retained as vapor at 60 °F.

LNG

Liquefied Natural Gas. For this site, LNG is produced using a proprietary process that separates landfill gas into methane and carbon dioxide, removes non-methane organic compounds, and compresses the purified methane.

Long ton

2200 pounds

Major Facility

A facility with potential emissions of: (1) at least 100 tons per year of regulated air pollutants, (2) at least 10 tons per year of any single hazardous air pollutant, and/or (3) at least 25 tons per year of any combination of hazardous air pollutants, or such lesser quantity of hazardous air pollutants as determined by the EPA administrator.

MAX or Max.

Maximum

MFR

Major Facility Review. The District's term for the federal operating permit program mandated by Title V of the Federal Clean Air Act and implemented by District Regulation 2, Rule 6.

MIN or Min.

Minimum

MOP

The District's Manual of Procedures.

MSDS

Material Safety Data Sheet

MSW

Municipal solid waste

MW

Molecular weight

N2 or N2

Nitrogen

NA

Not Applicable

NAAQS

National Ambient Air Quality Standards

NESHAPS

National Emission Standards for Hazardous Air Pollutants. See in 40 CFR Parts 61 and 63.

XI. Glossary

NMHC

Non-methane Hydrocarbons (Same as NMOC)

NMOC

Non-methane Organic Compounds (Same as NMHC)

NOx or NOx

Oxides of nitrogen.

NO2 or NO2

Nitrogen Dioxide.

NSPS

Standards of Performance for New Stationary Sources. Federal standards for emissions from new stationary sources. Mandated by Title I, Section 111 of the Federal Clean Air Act, and implemented by 40 CFR Part 60 and District Regulation 10.

NSR

New Source Review. A federal program for pre-construction review and permitting of new and modified sources of pollutants for which criteria have been established in accordance with Section 108 of the Federal Clean Air Act. Mandated by Title I of the Federal Clean Air Act and implemented by 40 CFR Parts 51 and 52 and District Regulation 2, Rule 2. (Note: There are additional NSR requirements mandated by the California Clean Air Act.)

O2 or O2

Oxygen

Offset Requirement

A New Source Review requirement to provide federally enforceable emission offsets for the emissions from a new or modified source. Applies to emissions of POC, NOx, PM10, and SO2.

PERP

Portable Equipment Registration Program

Phase II Acid Rain Facility

A facility that generates electricity for sale through fossil-fuel combustion and is not exempted by 40 CFR 72 from Titles IV and V of the Clean Air Act.

POC

Precursor Organic Compounds

PM

Particulate Matter

PM10 or PM10

Particulate matter with aerodynamic equivalent diameter of less than or equal to 10 microns

PM2.5 or PM_{2.5}

Particulate matter with aerodynamic equivalent diameter of less than or equal to 2.5 microns

PSD

Prevention of Significant Deterioration. A federal program for permitting new and modified sources of those air pollutants for which the District is classified "attainment" of the National Air Ambient Quality Standards. Mandated by Title I of the Act and implemented by both 40 CFR Part 52 and District Regulation 2, Rule 2.

PTO

Permit to Operate

PV or P/V Valve or PRV

Pressure/Vacuum Relief Valve

RICE

Reciprocating Internal Combustion Engine

RMP

Risk Management Plan

RWQCB

Regional Water Quality Control Board

\mathbf{S}

Sulfur

SCR

A "selective catalytic reduction" unit is an abatement device that reduces NOx concentrations in the exhaust stream of a combustion device. SCRs utilize a catalyst, which operates within a specific temperature range, and injected ammonia to promote the conversion of NOx compounds to nitrogen gas.

Short ton

2000 pounds

SIP

State Implementation Plan. State and District programs and regulations approved by EPA and developed in order to attain the National Air Ambient Quality Standards. Mandated by Title I of the Act.

SO2 or SO2

Sulfur dioxide

SO3 or SO3

Sulfur trioxide

SSM

Startup, Shutdown, or Malfunction

SSM Plan

A plan, which states the procedures that will be followed during a startup, shutdown, or malfunction, that is prepared in accordance with the general NESHAP provisions (40 CFR Part 63, Subpart A) and maintained on site at the facility.

TAC

Toxic Air Contaminant (as identified by CARB)

TBACT

Best Available Control Technology for Toxics

THC

Total Hydrocarbons (NMHC + Methane)

therm

100,000 British Thermal Units

Title V

Title V of the federal Clean Air Act. Requires a federally enforceable operating permit program for major and certain other facilities.

TOC

Total Organic Compounds (NMOC + Methane, Same as THC)

TPH

Total Petroleum Hydrocarbons

TRMP

Toxic Risk Management Policy

TRS

Total Reduced Sulfur, which is a measure of the amount of sulfur-containing compounds in a gas stream, typically a fuel gas stream, including, but not limited to, hydrogen sulfide. The TRS content of a fuel gas determines the concentration of SO₂ that will be present in the combusted fuel gas, since sulfur compounds are converted to SO₂ by the combustion process.

TSP

Total Suspended Particulate

TVP

True Vapor Pressure

VOC

Volatile Organic Compounds

VMT

Vehicle Miles Traveled

VOC

Volatile Organic Compounds

$\mathbf{W}\mathbf{M}$

Waste Management

Symbols:

< = less than > = greater than

 \leq = less than or equal to \geq = greater than or equal to
